INTELLICOM

A COMPLETE Communications System

Now you can tap any of the countless telephone data based INFO sources, EXTRACT and FILE that data away for use later. Suddenly, your computer is the smartest terminal around because INTELLICOM emulates such terminals as:

- Digital VT52/VT100
- TeleVideo 910 • ADM3 A/5
- ADDS Viewpoint/25
- CompuServe Executive
- TeleVideo 925

Now you can transfer both binary and text files, using simple ASCII, ASCII Capture, Xon/Xoff, XMODEM (both Checksum and CRC are supported),

KERMIT or CompuServe A Protocols. Operate at any speed up to 9600 baud without ever being outdated as higher speed/lower priced modems are introduced.

Simple menu selections, with a built in HELP facility keep it easy forever.

Autodial directories and auto login are supported along with simultaneous printing.

Additional features: Variable Buffer Size reduces disk activity, while utilizing RAM capacity. Customizing utility program included to ease installation and use. Persistence feature for autodialing and auto login.

Auto login script files can be used to support almost any smart modem and/or automatically log into your favorite remote system. User defined function keys. Color support. Remote access.

Best of all, the entire versatile INTELLICOM package costs you only \$69.95. FOR YOUR 520 ST!!

INTELLICOM is currently being used by ARMCO Steel, General Motors, Smithsonian Institute and countless other large corporations and government agencies worldwide. INTELLICOM is also available for use on IBM PC, Jr., AT and other true IBM compatibles as well as the Sanyo 550 series.

I/O Board

In keeping with our online theme, Antic is only answering telecommunications questions in this issue's I/O Board. General responses return next month.

BAUD VS. BPS

I seem to remember a discussion on the difference between baud and BPS when referring to modems. Which issue was it in? Are these terms interchangeable, or are they different measures completely?

Les Green
Lilburn, GA

They're essentially the same. BAUD is a unit of signal speed used in communications, usually bits per second (BPS). Transmission at 300 BAUD is roughly equivalent to 300 characters per minute. The term is derived from the last name of J.M.E. Baudot, a nineteenth century Frenchman who developed the Baudot code for telegraph transmission. This was covered in the August, 1985 Antic, page 12.—ANTIC ED

STINKY SOFTWARE

I own an pre-Supra MPP 1000-C modem. But to be frank, I think the terminal software that came with it stinks! Can you suggest new software I could download from online or buy?

Marc Whipple
CompuServe ID
73147,3070

You're not condemned to use the software packaged with any modem. It's usually included by manufacturers as a courtesy to get you started online. For the MPP, go to the Atari 8-bit SIG on CompuServe, type BRO/KEY MPP and download the file listed as MSCOPE.XMO—the version of TSCOPE for MPP modems. It's also available from the Antic Catalog (\$10, PD040). A version of AMODEM for MPP modems can be found online under AMOMPPE.XMO. Backtalk also works with the MPP (\$19.95, Antic Catalog, AP154).—ANTIC ED

BBS QUEST

I have just purchased an Atari 1030 modem and was wondering where I can find a list of BBSs and modem users that

I can get in touch with. I also would like to know where I can get a program to make my own BBS. I have many games, utilities and demos I want to share with people.

Robert Harris
Austin, TX

The best place to look for BBS numbers is on a BBS, which will usually have a section listing other BBS numbers of interest. And some BBSs, such as the one run by BUG—Boise Users Group, (208) 383-9547—specialize in keeping updated lists of Atari BBS numbers. Just find one BBS, call and ask about others, and you'll soon find more numbers than you know what to do with.

*As for a do-it-yourself BBS program, we know of only one commercially available for the Atari, Bulletin Board Construction Set (\$24.95, Antic Catalog). Many BBS sysops write their own BBS programs. Pro*Term author Matt Arrington (Antic, 1985) runs the 300 baud Madrona Marsh BBS (213) 212-6414 in Torrance, CA with a program he wrote himself.—ANTIC ED*

TOUGH CHOICES

I am in the market to buy a modem and have narrowed my choices to the Atari 1030 or XM301, and the Supra 1000-E. Which best suits an intermediate programmer who would use it with online services and maybe eventually start a BBS? Can any of these be used with an Apple IIc or IIe?

Kevin Westerdorf
Cincinnati, OH

To run a BBS on the 1030 you'll need a ring detector. Some people build their own ring detectors, schematics should be available from most users groups. The Supra and XM301 both have this feature built-in. You can't use any of these modems with an Apple computer, as they are direct-connect modems specifically tailored to the Atari.

A non-direct-connect (external) modem such as the Hayes or a Hayes-compatible like the Anchor Volksmodem 12 will work with both Apples and Ataris. You'll need an Atari 850 interface to make the Hayes modem work with an Atari computer. You can plug right into the Apple IIc

continued on page 8

Rats

A GUIDE TO YOUR RAT SYSTEM

Finally, a mouse for your Atari 400, 800, XL or XE! It's like getting a new computer!

Sure your Atari has super resolution. But no mouse. The March issue of *Analog* said that a mouse would make the 8-bit Atari "the toughest competitor on the 8-bit market" . . . that it would be great if these computers had a mouse. Now they do! Because we just developed the RAT. It's not merely a mouse, but an entire graphics system capable of generating high resolution drawings, graphs, charts and decorations.

And right now you save \$55 to \$85 over mice made for other 8-bit computers.

Already such software as *Super 3-D Plotter*[®], *Master Disk DirectoryII*[®], *Writer80*[®], *Rambrandt*[®] and *AtariArtist*[®] have RAT-compatible versions.

Other software companies are scrambling to make their products RAT-compatible. They love the RAT. They should, the thousands of Atari 400, 800, XL and XE owners represent a huge new customer base for their mouse-only programs. Look for the RAT-compatible seal on the package.

We also developed the RAT PACK Starter System to accompany the RAT.

It's a package of software that will let us do a variety of exciting graphics. Draw. Make diagrams. Use for creative sketching.

The time for bland reports has ended. Develop them with professional excitement . . . even technical drawings . . . with the RAT and the RAT PACK. Included in the PACK are: **RAT TRACE**, an icon-driven ACCU-DRAW program for high resolution drawings and graphics developed by Vision Software. It's part of the RAT PACK Starter System. Also included is **RAT CONTROL**, a simple program that lets you move the cursor by pushing the mouse—in any direction, at any time, quickly.

You also receive instructions on how to use the RAT in your own programs, without the use of any machine language or complicated routines.

Get a virtual new computer! Send for RAT and RAT PACK Today!
Does "mouseless" mean "lifeless?"
Wake up your Atari into a virtual new computer. Do graphs, diagrams, send sketches—with professional high resolution and excitement.

Send check or money order! Only \$114.95
Or call for C.O.D.!

215/374-5478 • 10:00 a.m. to 3:00 p.m.

Zobian Controls

P.O. Box 6406, Wyomissing, PA 19610

Yes!

Send me the RAT, complete documentation, and the RAT TRACE, the RAT CONTROL and the rest of the RAT PACK.

I enclose check or money order of \$114.95, plus \$2.00 shipping.
Or send C.O.D. (\$3.00 extra.)
PA residents add 6% sales tax.

continued from page 6

serial port, but you'll need a DB-25 serial port connector and a serial card such as the Apple Super Serial Card for the II.—ANTIC ED

MODEM MODIFICATION

The buzzer on my MPP 1000-C modem was waking up my sleeping parents late at night, so I disconnected it and added one red and one green LED. The green one stays on all the time when the DATA/VOICE switch is in the voice position, and is an easy way to tell if the phone is connected. When the switch is in the data position, both are lit. When dialing, the green light flashes with the pulses. While waiting for a carrier, the red one is lit. Finally, when a carrier is found, both LEDs are out.

KERMIT AIN'T NO FROG

What is Kermit Terminal Emulator (I've seen this in Antic's catalog) and how is it used? Will it enable me to receive software designed for other computer systems?

Gary Cerasoli
Medford Lakes, NJ

Kermit, which really is named after Sesame Street's Kermit the Frog Muppet, is a file transfer protocol that monitors the flow of information between different types of computers. The first Kermit implementation, developed at Columbia University in 1981, linked a DEC-20 mainframe to a CPM-80 microcomputer. With Kermit, you can download software designed for other computers, but you won't be able to run it on your Atari. For more about Kermit, see Charles Jackson's article in the August, 1985 Antic, page 25.—ANTIC ED

NEW OWNERS COLUMN

New Owners Column returns next month in Antic's September issue, with Lesson 6: Subroutines.

Antic Online

MENU STREAMLINING

Now easier to use

Type GO ANTIC when you log onto CompuServe in July. During the next few weeks, you'll see a number of significant changes in ANTIC ONLINE. We're making Antic's entire online edition easier to use, removing outdated material and streamlining the menu structure.

When the job is finished, you should be able to locate new articles more quickly than ever. But you'll still be able to refer to previous reviews and product information, which will be moved to an archive section.

The new ANTIC ONLINE will con-

tinue to provide the latest news about the Atari community, as well as providing in-depth technical information such as Tim Oren's Professional GEM ST developer's column. There's still plenty of room for suggestions and we welcome reading your ideas on the ANTIC ONLINE I/O Board.

If you're not a CompuServe subscriber yet, see your local computer dealer or phone (800) 848-8199 for information about signing up. Ohio residents phone (614) 457-0802. There is no extra charge for accessing ANTIC ONLINE.

COPY II ST™

BACKUP PROTECTED SOFTWARE FAST.

From the team who brought you COPY II PLUS (Apple), COPY II PC (IBM) and COPY II MAC (Macintosh) comes a revolutionary new copy program for the Atari 520 and 1040 ST computers.

- Copies many protected programs—automatically. (We update COPY II ST regularly to handle new protections; you as a registered owner may update at any time for \$15 plus \$3 s/h.)
- Supports single and double sided drives.
- Includes both a fast sector-based copier and a true bit copy mode for protected disks.

Requires an Atari 520 or 1040 ST computer with one or two drives.

Call 503/244-5782, M—F, 8—5:30 (West Coast time) with your   in hand. Or send a check for \$39.95 U.S. plus \$3 s/h, \$8 overseas.

\$39.95

Central Point Software, Inc.
9700 S.W. Capitol Hwy. #100
Portland, OR 97219

*Central Point
Software*
INCORPORATED

*Backup utilities also available for the IBM, Apple II, Macintosh and Commodore 64.
This product is provided for the purpose of enabling you to make archival copies only.*

BOOK I + DISK: [The Original] Thoroughly explains the techniques used by advanced software pirates, and the copy protection methods used to stop them. It offers clear and understandable explanations sophisticated enough for software writers of any scale yet easy enough for a beginner just wanting to learn more about Atari® computers. A **MUST READ FOR ALL ATARI® OWNERS.**

BOOK INCLUDES: • Duplicate sectoring • Custom disk formatting • Creating "BAD" sectors • Hardware data keys • Legal protection like copyrights, trade secrets, patents • Protecting BASIC programs • Self-modifying Code • ROM + EPROM cartridges • Hidden serial numbers • Self-destructing programs • Freeware • Misassigned sectoring • Much, much more.

DISK INCLUDES: • Directory mover • VTOC scanner • Duplicate sector finder • Sector mover • Bad sector writer • Sector data displayer • Autoran builder • Other useful programs.

This comprehensive book and disk package should not be confused with low quality imitations offered elsewhere.

BOOK II + DISK II: Advanced Software Protection. This all new sequel starts where the highly acclaimed Book I leaves off. Book II is the most up-to-date resource available for the Atari® owner. Includes reviews and explanations of products such as: *The Happy Enhancement™*, *The Impossible™*, *The Scanalyzer™*, *The Chip™*, *The Pill™* and *Super Pill™* & many others.

Book II: Tells you specifically what they copy, what they won't, how they are used, and the details of how they work. **Book II** also includes such topics as: • Transmitting protected programs • Copying disks with more than 19 sectors/track. Includes the newest protection methods by companies like Synapse™ AND Electronic Arts™ • Data encryption • Phreaking methods • Program worms • Logic bombs • Bank-select cartridges • Random access codes • New trends in software law • Sample BASIC + Assembler programs • On-line security • And much more.

DISK II INCLUDES: • Automatic program protector • Custom format detector • Newest protection demos • Forced password appender • Data encrypter • And much more.

Book + Disk Packages only \$24.95 each or Special Offer both for only \$39.95

GEORGE MORRISON

DIGITIZE YOURSELF

AT LAST A UTILITY THAT DOES IT ALL... Scans & Analyzes ALL Atari® programs. Works on Disk, Cartridge or programs stored on memory. Converts complex machine language into readable assembler. Transforms ANY Atari BASIC program into NEW AND IMPROVED FEATURES!

THE Scanalyzer

listable, modifiable BASIC • Changes a 4, 8 or 16K cartridge into a binary load file and source file that you can view & change using regular Atari® assembler. Clearly shows protection techniques such as: BAD SECTORS, BAD DATA MARKS, DUPLICATE SECTORS and FORCED CRG ERRORS.

NEW FEATURES: Now fully supports DOS 2.5 and includes one pass sector copier for 30K owners. Even finds and displays hidden directories. No other program can do this!

\$29.95 Complete with instructions in theory and use.

IMPERSONATOR CARTRIDGE TO DISK COPY SYSTEM

CARTRIDGE TO DISK COPY SYSTEM Yes, for only \$29.95, you can make working copies of all your Atari computer cartridges (16K or less). Our special package will let you save your cartridges to ordinary disk files. They will run exactly like the originals when used with the Impersonator. Each disk holds up to 12 cartridge programs. Now you can put all your real cartridges away for safe keeping and use the Impersonator for everything. YES, IT REALLY WORKS. The Impersonator does everything the high-priced cartridge back-up systems do...and more. **ONLY \$29.95**

COMPUTER EYES, capture software and MAGNIPRINT II+ Only \$114.95

COMPUTER EYES/MAGNIPRINT Camera System
A complete ready to run system for those without access to video equipment. This system includes Computer Eyes, Magniprint II+, a high quality B/W video camera, and a 10 ft coaxial cable with appropriate connectors. Only **\$299.95**

COMPUTER EYES alone (with capture and display software only) **\$99.95**

Computer Eyes Gr.9 Acquisition Software. \$12

Computer Eyes lets you take any form of video input and saves it as a high-resolution graphics screen. You can use a video camera, VCR, TV output, video disk, other computers, etc. Now you can capture your picture, your friends or any video image and show it on an Atari computer. Computer Eyes is an innovative slow scan device that connects between any standard video source and your Atari computer (see the review in A.N.A.L.O.G. magazine).

- Do a complete Hi-Res scan in under 6 seconds
- Unique multi-scan mode provides realistic grey scale images in 24 seconds, and up for more detail scans.
- Full one-year warranty on parts and labor
- Plugs into your Atari joystick ports and uses a standard video phono plug

Now anyone can create the kind of graphics seen in this ad. When Computer Eyes is combined with Magniprint II+, you get unique capabilities that no other system can offer.

- Print pictures with full shading for a level of realism even better than your TV screen
- Take your Computer Eyes images and modify them with your Koala Pad, Atari Touch Tablet, Micro Illustrator program, or Magniprint's special touch-up feature

MAGNIPRINT II+ MAGNIPRINT II+

TAKE CONTROL OF YOUR PRINTER

Print your Graphics in an amazing variety of sizes, shapes and shades!

- 18** Proportionally correct sizes, including Huge Poster Printing
- 9** Levels of distortion to stretch or squeeze dimensions
- 14** Graphics modes – works with everything from Graphics 0 text to fully shaded Graphics 12
- 16** Levels of Shading for spectacular resolution and detail
- 24** Compatible Graphics Programs = Print your own pictures or those created with PRINTSHOP™, Koala Pad™, Micropainter™, RAMbrant™, B-Graph™, Syngraph™, PAINT™, Microllustrator™, ComputerEyes™, and many, many more.

- + ZOOM** Print the entire picture or zoom in on only the parts you want
- + ALTER** Automatically switch between graphics modes to add details and shades
- + TOUCH UP** Use your Joystick to change the picture, rotate colors, and select your own shades for printing
- + HELP** Instant Help Screen for easy use

TOTAL = MAGNIPRINT II+

Adds up to MORE POWER, MORE versatility, and MORE features than any other print program. And best of all it gives you BETTER QUALITY PRINT-OUTS.

By specially shading each printed pixel, MagniPrint II+ uses your printers full resolution for uncomparable quality and detail. MagniPrint II+ works with all EPSON, Gemini, STAR, NEC, Citoth, Panasonic, and any compatible printers (850 interface or equivalent required).

INCREDIBLE POWER AT AN AMAZING PRICE OF JUST \$24.95

FREE: With every Magniprint II order get "PRINTALL" FREE. PRINTALL prints your programs and files just as they appear on the screen. It clearly prints INVERSE and all the Atari graphics characters, and prints in regular or condensed print. This alone is worth the price.

Digitize Your Voice With Parrot

...so good it's being used by professional musicians in a band.

All new sound digitalizer and synthesizer for your Atari. Tired of low-quality mechanical sounding voice output? Now you can make any Atari speak in your own voice. Tired of four tone sound? Now any Atari can play a whole orchestra complete with a singing choir.

"The Parrot" digital sound synthesizer system lets you do all this and much more. How it works – "The Parrot" system plugs into your joystick port and lets you record pure digital sound from your stereo, TV, microphone, or any other sound source. The special Parrot software lets you play back this high quality sound on any Atari system with no special hardware needed. It even lets you put this unbelievable sound right into your own programs, that will run on anyone's Atari. It also includes digital sequencer software that lets you turn your Atari into a synthesizer comparable to those costing thousands of dollars. Imagine playing a song with the sounds of a dog's bark, a chinese gong, a car's honk, your own voice, or anything your imagination can come up with. It turns your keyboard into an organ and lets you instantly switch between up to nine different digital sounds, each with three full octaves of notes. Recording time varies depending on available memory and quality level desired. You've got to hear it to believe it!!

THE PARROT digital input hardware and playback/synthesizer software with sample sounds and demos.

All for Only \$39.95

NOW for ST Owners

ATARI® ST GOES DIGITAL!!!

HIPPO VIDEO DIGITIZER
Use the full resolution and speed of your ST for incredible results. Capture a high or medium res picture in 1/60th of a second. Flip through 10 frames a second for Photo Quality animation. Use any standard video camera, VCR, video disk, or TV output. Save your pictures in NEOCHROME or DEGAS format for easy touch-ups and adding color. Special Hardware and Software **only \$119.95**

COMING SOON – POWERPRINT
Capture any ST screen and print it out with amazing versatility and styles. Select your own shading and print in hundreds of shapes and sizes. It makes the perfect companion for the video digitizer or your favorite graphics drawing program.

HIPPO SOUND DIGITIZER
Record and manipulate sounds in their pure digital form. Plug in the microphone (included) or hook it up to a radio, tape recorder, TV, etc. Comes with an audio output jack so you can play back through your stereo or PA system. Record, play, analyze, and manipulate pure digital sound using your ST's power and easy mouse control. Comes complete with everything you need for only **\$119.95**

All for your Atari Computers. Disk drive and 48K required. Atari® is a registered trademark of Atari Corporation. *Denotes products not related to Alpha Systems

GOING ONLINE

by GIGI BISSON and CHARLIE JACKSON

Step-by-step to your first download

Dear Antic:

I'm having problems downloading software from SIG Atari with my 800XL, 1030 modem and HomeTerm. Help!*

Paul Marquette

(The blind, stumbling user on CompuServe)

Auburn, IL

CompuServe can turn into ConfuServe if you don't know your way around. Wandering through any online service, be it Delphi or Dow Jones or Plato, is like roaming around in the dark through the stacks at a huge university library—you'll never find your way around until you get lost a few times.

We can't show you everything, so we'll show you how to do the one thing readers ask us about the most:

HOW TO DOWNLOAD SOFTWARE

When you download, you're simply

transporting a file—a conversation you had on a Special Interest Group (SIG), an electronic mail message, or a program — from CompuServe's huge Digital Equipment VAX mainframe computers in Columbus, Ohio, over telephone lines and "down" into your computer. "Uploading" means going the other way—sending something from your Atari "up" into the big computers at CompuServe.

PUT YOUR MANUAL AWAY

Sound easy? It is, once you learn. First, put your CompuServe manual away—consulting it will only make you thoroughly confused. With these instructions, even if you're a total novice, it should take about 30 minutes to do your first download. We think it's a small price to pay for "free" software. After you stumble around a few times, you'll be doing downloads completely from memory—in a matter of minutes. Later, you can take out that CompuServe manual, turn to

page 28 of the Forums section and discover how to turn off the menus completely, speeding the process up even more.

Our system is an Atari 800 computer with disk drive and a Hayes 1200 baud Smartmodem. In this article, we'll demonstrate Express, which according to our reader surveys is the most widely used 8-bit Atari telecommunications software. We downloaded our copy of this public domain program from CompuServe. You can also obtain Express from an Atari users group. The Antic Catalog carries Express 1030, for the Atari 1030 modem (\$10, PD0025), and Express 850, for modems requiring the Atari 850 interface (\$10, PD0024).

If you already know how to log on to CompuServe, skip ahead to the Welcome to CompuServe section below. Otherwise:

1. Boot up Express on your Atari. The 1030 and 850 versions of Express are almost identical.

The main menu appears. Just like the menu in a restaurant, it offers many specialties we can "order"—in this case, by pressing a key. The menu "toggles" back and forth with the [OPTION] and [SELECT] keys.

We spent hundreds of hours wading through CompuServe so you won't have to

2. Set the software for the mode that your information service requires. In this case:

Mode: ASCII

To do this, type the letter A—it will toggle back and forth from ASCII to ATASCII.

Duplex: FULL

Parity: NONE

continued on next page

3. Type **E** to dial manually, and type in your nearest CompuServe telephone number. This information comes in the CompuServe starter kit. Press [RETURN]. The computer will beep and you'll see:

Connected!

Don't believe it—this software lies. Wait a few seconds until you see:

CONNECTED

If it doesn't connect, start over. Charlie and I tried five times before it worked. Now hold down the [CONTROL] key while you type C.

When you use an online service or a Bulletin board, you are really using your Atari as a remote terminal. You are now "leaving" your Atari computer and logging onto CompuServe's VAX computers in Ohio. Express 850 is still in memory, and you'll go back to it later.

You're asked for your CompuServe ID number, otherwise known as a PPN. (Antic readers are always asking us what this means. Contrary to popular belief, it does not mean "Please Pay Now." PPN stands for "Project Programmer, Number.")

When you see these "prompts", type what they ask for:

USER ID: 12345,678 (your user ID number)

PASSWORD:

Your password will be "invisible" when you type it in. If this is your *first* time on CompuServe, at this point you'll need to follow the rather confusing procedure in your starter kit to finish the log-on procedure. If you're not a CompuServe subscriber yet, see your local computer dealer or phone (800) 848-8199 for information about signing up. Ohio residents phone (614) 457-0802.

WELCOME TO COMPUSERVE

You'll get this menu first:

CompuServe

TOP

- 1 Subscriber Assistance
- 2 Find a Topic

- 3 Communications/Bulletin Bds.
 - 4 News/Weather/Sports
 - 5 Travel
 - 6 The Electronic MALL/Shopping
 - 7 Money Matters/Markets
 - 8 Entertainment/Games
 - 9 Home/Health/Family
 - 10 Reference/Education
 - 11 Computers/Technology
 - 12 Business/Other Interests
- Enter choice number !

CompuServe is structured like a pyramid. Picture this menu as resting at the top of thousands upon thousands of menus that form the base of a vast, perhaps even infinite, pyramid. By typing **T** at any ! prompt, you'll

always eventually work your way back up the pyramid to this first menu. If you ever get lost, (and you will, believe us) think of it as home.

TAKE THE FREEWAY

Why meander on back roads when you can take the freeway? That's what the CompuServe GO commands are like—a shortcut that bypasses all the intermediate menus. Any time you see a ! prompt, you can type GO ANTIC, for example, and be whisked into ANTIC ONLINE, or GO CB-1 and—boom—you're in the CB simulator. A complete list of these commands is published monthly in CompuServe's *Online Today* magazine.

BOOKS ABOUT ONLINE

Online Services can be expensive if you don't have any idea what's going on. Users need a roadmap, and a good book provides that map. Here are a few:

THE JOY OF COMPUTER COMMUNICATION

by William J. Cook
Dell Trade Paperbacks
\$5.95, 182 pages

This *Newsweek* reporter's breezy intro to the online world is limited, but worth reading for the chapter on improving your sex life with online dating services.

CONNECTIONS: TELECOMMUNICATING ON A BUDGET

by Robert Chapman Wood
Scott Foresman and Company
Glenview, IL
\$15.95, 264 pages.

Some limited Atari 8-bit specific information, but worth checking into for irreverent, outspoken reviews of services, good and bad, for the budget-minded telecommunicator.

HOW TO GET THE MOST OUT OF COMPUSERVE,

Second Edition
by Charles Bowen
and David Peyton
Bantam Books
New York, NY
\$16.95, 322 pages

Columnist John Dvorak tells the story about the time comedian and computer hobbyist Robin Williams was visiting his house. "The first time he saw *Get the Most Out of CompuServe* he held it to his chest and said 'I need this book.' That's when I realized that Bowen and Peyton had stumbled onto a hot property." Heck, you need this book. Throw away your CompuServe users manual. This invaluable resource by two dedicated online addicts is clearly a labor of love. Peyton is the sysop of the GoodEarth Special Interest Group and frequents the CB Simulator under the alias "Hermit Dave," and you can even send electronic mail to the authors. Also from the same authors and publisher: *How to Get the Most Out of The Source*.

In this case, at the ! prompt, type **GO ATARI8** to reach the Atari 8-bit forum in SIG*Atari:

Enter choice number ! **GO ATARI8**

If this is your first visit to SIG*ATARI, your first stop will be this menu:

BOOKS ABOUT DATABASES

What is an online database?

An online database is nothing more than an electronic library. Instead of storing information on paper, it's stored in huge mainframe computers. A membership fee and password are the library card you need to "check this information out" and send it to your computer where you can browse through it, store it to disk, or make a paper printout. It's expensive, but unlike a library, you can keep it forever. No fines, no overdue notices.

Many databases are available within a larger services. CompuServe and Dow Jones News Retrieval, for example, are online libraries. You can think of the databases within them as electronic encyclopedias. Books about databases are paperbound information sources that lead you to electronic information services where you can, in turn, find more information about information. Here are a few.

OMNI ONLINE DATABASE DIRECTORY

Mike Edelhart and

Owen Davies

Macmillan Publishing, New York
1983

\$10.95, 292 pages

Already outdated but well-indexed book takes the "cutting edge" approach with opinionated reviews of 1,000 online databases.

COMPUTER DATA AND DATABASE SOURCE BOOK

by Matthew Lesko

Avon Books, New York

\$14.95, 900 pages.

A wealth of objective information about databases available within larger services such as The Source, DIALOG, CompuServe and Dow Jones. The information itself is even available online through NewsNet, an information service devoted exclusively to business newsletters, (\$24 an hour at 300 baud during prime time) by calling (800) 345-1301.

ANSWERS ONLINE

by Barbara Newlin

Osborne McGraw-Hill

Berkeley, CA

\$16.95, 373 pages

Includes valuable tutorials on how to sign up and search for information on a number of online services.

ONLINE ACCESS GUIDE

53 West Jackson Blvd. Suite 1750

Chicago, IL 60604

(312) 922-9292

\$24.95 yearly

Online services are growing at the rate of 500 every six months. This quarterly magazine promises current listings of over 4,000 services.

popular is XMODEM, sometimes called MODEM7. Most modem programs, including the one we're using, Express, are compatible with it. See your terminal software manual to determine which protocol you need. For more details about these protocols, see page 20 of the Forums section in your CompuServe manual.

Starting XMODEM transfer
Enter a carriage return when
transfer is complete

RETURN TO EXPRESS

Remember your telecommunications program? It's time to return to it again. (By the way, telecommunications programs are often called modem programs or terminal programs.) You are still logged onto CompuServe and paying for connect time, but you are simultaneously accessing your Atari microcomputer's memory.

Tell your modem program to download a file. With most programs, you have to press one of the console keys [SELECT], [OPTION] or [START] to display your modem program's Function Menu. (With Express, we press the [SELECT] key). Take the terminal software disk out of the disk drive and insert a formatted disk with enough space to save the file we're downloading.

On the terminal program's menu, tell the Atari to download a file using XMODEM. (With Express, we press R.) The terminal program should then ask you to type in a filename for the file you're downloading. When your modem program receives your file, it will automatically SAVE it to disk using the filename you typed in. You do *not* need to use the same filename that CompuServe gave it.

CompuServe lets you know when the download is finished. Press [RETURN] to go back to communicating

with the CompuServe computers. If you want to log off CompuServe, type **OFF** or **BYE** at the ! prompt and you'll return to your modem program. Now you can start your computer again and test out the downloaded file. We downloaded a graphics file, so we'll need to boot a graphics program before we can run it.

This is the fun part—it's like unwrapping a birthday gift. Sometimes you'll find a real gem, like Fuji Boink—the 8-bit Atari version of the Amiga bouncing ball demo. Sometimes you'll find some real junk. Charlie and I downloaded what sounded like a very appealing Beethoven symphony, only to find a buggy program that never ran. But some of the finest software around is in the public domain. The free flow of information and the romance of the hacker ethic still thrive in the world of online communications.

The best boards in life are free

If a commercial online information service is like a university, a bulletin board is like a classroom. You enter and see messages pinned up on the bulletin boards by people who have been there before. You read what's there, post your own messages and then leave. Each time you walk in, there's more writing on the board.

A bulletin board system (BBS) is a miniature version of CompuServe or Delphi. When you log on, instead of communicating with a huge mainframe, you're talking to another microcomputer. You can call any BBS that's compatible with your modem's baud rate. However, although an Atari computer can communicate with a Commodore bulletin board, you won't be able to run Commodore software that you download.

Bulletin boards emerge and die quickly. Some may only be available

during certain hours, or to certain modems and baud rates. Others may ask you to register or charge a small fee before you can use them. And you must always pay local or long distance phone charges too. While you try to connect, you may have to endure half an hour of busy signals. Since most bulletin boards are "single-user" systems, only one person can call at a time.

For this reason, BBS's are not as "patient" as CompuServe. Most sysops (system operators—the folks who run bulletin boards) want you to hurry. An impatient BBS will log you off if you're too slow.

If you have any problems you can use the YELL command to call the sysop. Don't be shy. Just because sysops have names like "Dragon-Master" or "Rambo" doesn't mean they'll breathe fire if you need help. Sysops are usually friendly, normal

people having fun with their alter egos. They wouldn't invite you if they didn't want to talk. Some even keep a "chat bell" next to their beds to wake them up in the middle of the night if someone wants to chat online.

There are currently more than 2,000 bulletin boards in the United States. They include Dial-Your-Match for daters, boards for pilots, parents, peace activists, adventure gamers, genealogists and rock musicians. Even Atari Corp. has a 24-hour bulletin board at (408) 745-5308.

Special boards, known as FIDO boards, can link these smaller networks together. Every morning between 1 and 2 am, all the FIDO boards call each other to transfer messages. You can leave a message on a FIDO in your home town, and the next day, it reaches a board across the nation.

Graphic Arts

The Next Step in the Evolution of Software

Imagine combining the functions of Computer Aided Design (CAD), Business Graphics, free-hand drawing, and typesetting programs into one package. Include functions of a simple spreadsheet for data manipulation. Add abilities of a simple word processor for text annotation in various fonts, sizes, and rotations. Mix all these features into a single package instead of "integrating" separate packages. The result is a new breed of software: **Graphic Arts**. The only graphic arts program available: **The Graphic Artist**.

The Graphic Artist is menu, macro, command, and language driven. You read correctly. Menus for beginners, commands and macros for experts. And an optional language interpreter for creating custom applications.

Support for dot matrix printers, color plotters, and laser printers is standard, of course.

Impressed? Wait until you see a demo at a dealer near you!

The Graphic Artist

Graphic Arts has finally arrived.

ANTIC ONLINE SURVEY RESULTS

Over 1,000 ANTIC ONLINE users voted for their favorite modems and telecommunications software during March and April of this year. The results are summarized below:

MODEMS

Although 47 different modem models were named, none below the top-ranked eight earned more than a handful of votes. Some 61% of the votes went to just the top four modems—all of which are the familiar direct-connect 300 baud modems from Atari and MPP (now Supra) which do not require any special interface unit.

The most popular modem, the Atari 1030, earned 35% of the total votes—as much as the next five runner-ups combined. The simple, inexpensive 1030 got ratings of 5 (highest level) for reliability and value.

The “son of” the 1030, the Atari XM301, came in second with 13% of the votes. It received three ratings of 5, for reliability, value and ease of use.

The two MPP direct-connect modems received a total of 14%—with the MPP 1000-E accounting for 9% and the earlier MPP 1000-C getting 5%.

The Hayes 1200 baud Smartmodem was in fifth place. This industry-standard modem won a top rating in five of the seven survey categories, falling below the 5 level only in price value and automatic features. Incidentally, the Hayes 300 baud model was in seventh place and the Hayes 2400 baud model was in the top 20.

The no-frills 300 baud Anchor Volksmodem held sixth place with 3% of the vote and top-level ratings in four categories.

MODEM SOFTWARE

Choice of telecommunications software depends on what modem you are using, of course. So with the Atari 1030 Modem such a dominant hardware choice, it's not surprising that software for the 1030 and other direct-connect modems led the pack of 38 products.

Far in the lead was 1030 Express, with 21% of the votes. The public domain favorite by SIG*Atari sysop Keith Ledbetter earned 32 out of a possible 35 points in quality ratings. Ledbetter's companion public domain program, 850 Express (for non-direct-connect modems such as the Hayes)

held sixth place with 5% of the votes and a perfect 35 rating!

HomeTerm, from Batteries Included's HomePak, was in second place with 12% of the votes and an overall rating of 30. Smart Terminal software, various versions of which are included with MPP (now Supra) direct-connect modems, came in third with 10%.

XE-Term, the software included with the Atari XM301 Modem, was in fourth place with 6% and a 30-point rating. Quantum Microsystems' ST Talk, for the Atari ST (28 points), and the familiar public domain TSCOPE (25 points) tied for fifth with 5% each.

In seventh place with a 29-point quality rating and 4.7% of the votes was Pro*Term, a type-in listing from the August, 1985 issue of **Antic**. Backtalk from the Antic Catalog came in eighth with 28 points and 4% of the votes. PC/Intercomm, an ST program from Mark of the Unicorn, was in ninth place with 32 points and 3% of the votes. Few of the remaining software packages earned more than one or two ballots.

Here's how
to order

M O D E M S

SUPRA 300-AT

(MPP 1000-E)

Supra Corporation
1133 Commercial Way
Albany, OR 97321
(503) 967-9075
\$49.95

The 300 baud, direct-connect modem formerly known as the MPP 1000-E is now being sold as the Supra 300-AT. It comes with Smart Term software that allows uploading, downloading, auto-dialing, auto-answer and XMODEM protocol. Scheduled for release by the time you read this is a new, enhanced Supra 300-AT that comes with Smart Term version 7.0 and can also work with Supra's more advanced Omega software.

HAYES SMARTMODEM 1200

Hayes Microcomputer Products
5835 Peachtree Corner East
Norcross, GA 30092
(404) 449-8791
(8-bit Ataris require 850 interface)
\$599

Solidly constructed, full-featured

Hayes modems are the standard that the rest of the industry is judged against. And the Hayes command set is the standard that most third-party telecommunications software is written for. The Hayes Smartmodem 1200 adjusts automatically between 300 or 1200 baud. It can switch between voice and data transmission on a single call. Features include auto-answer, auto-dial and redial, built-in speaker, outstanding documentation. It can communicate with complex office PBX systems, with overseas modems that use the CCITT V22 format, or with the bulletin board across town.

ATARI 1030

Atari Corp.
1196 Borregas Avenue
Sunnyvale, CA 94086
(408) 745-2000
\$49.95 (varies)

Although no longer manufactured, the dependable 300 baud, direct-connect Atari 1030 is still going strong. New units remain available—check the mail-order ads in *Antic*. Most users today bypass the 1030's built-in software (which doesn't even require a disk drive) in favor of a wide variety of third-party software that allows this simple modem to upload, download, auto-dial and even operate a bulletin board.

ATARI XM301

\$49.95

The worthy successor to the 1030, Atari's XM301, builds a number of advanced features directly into the inexpensive 300 baud direct-connect format. No larger than a deck of cards, the XM301 has auto-dial and auto-answer built in, and doesn't need an external power supply. You get a 49-page manual and some \$270 worth of online discount offers. The included XE-Term software is an outstanding value in itself.

VOLKSMODEM 10

Anchor Automation
6913 Valjean Avenue
Van Nuys, CA 91406
(818) 997-7758
\$79.95

This 300 baud, direct-connect modem is a simple, reliable work-horse that plugs into joystick port 2. Not to be confused with the Hayes-compatible 1200 baud non-direct-connect Volksmodem 12 (\$299) Coming soon is the Volksmodem 520 for Atari STs.

COMMUNICATIONS SOFTWARE

1030 EXPRESS, 850 EXPRESS (PUBLIC DOMAIN) 48K disk

The first choice of Atari owners according to our surveys, Keith Ledbetter's Express telecommunications programs are perhaps the most sophisticated, user-friendly software ever put into public domain. As the titles indicate, 1030 Express is for the Atari 1030 and XM301 direct-connect modems, while 850 Express supports Hayes-compatibles and other standard modems that require an RS-232 serial interface such as the Atari 850. One online source for Express is Data Library 2 on CompuServe's 8-bit SIG *Atari section—type BRO/KEY EXPRESS for instructions. Also Antic Catalog's 1030/XM301 disk (\$10, PD0025) includes 1030 Express.

HOME TERM

Batteries Included
30 Mural Street
Richmond Hill, Ontario
L4B 1B5 Canada
(416) 881-9941
\$49.95, 48K disk

HomeTerm is an easy-to-use, versatile telecommunications program that provides uploading, downloading and autodialing with just about any 300 baud or 1200 baud modem. It's part of the HomePak package that also includes a simple word processor and file manager. An ST version of HomePak is on the way from Batteries Included.

TSCOPE (PUBLIC DOMAIN) 16K disk

TSCOPE, by Joe Miller, is the standard public domain program for uploading and downloading CompuServe SIG *Atari files and VIDTEX pictures.

This program works with Atari 1030/XM301 direct-connect modems as well as standard 850-compatible modems. TSCOPE can be downloaded from Data Library 2 on CompuServe's 8-bit SIG *Atari section—type BRO/KEY TSCOPE for instructions. It's also included on Antic Catalog's 1030/XM301 disk (\$10, PD0025).

SMART TERM

Supra Corporation
1133 Commercial Way
Albany, OR 97321
(503) 967-9075
Included with MPP 1000-E
\$24.95 (v. 6.1), 48K disk

Over the years, Smart Term has evolved through many versions, consistently improving. The latest revision, 7.0, will be bundled with the upcoming Supra 300-AT enhanced model. According to Supra, Smart Term 7.0 will hold 10 phone numbers for autodialing, support 80-column displays and has an audio hookup for TV speakers. It handles uploads, downloads, auto-dial, auto-answer, XMODEM, pulse/tone dialing.

XE-TERM

Atari Corp.
1196 Borregas Avenue
Sunnyvale, CA 94086
(408) 745-2000
Included with Atari XM301
32K disk

Antic reviewer Matt Ratcliff (March, 1986) called XE-Term "superb." Easily operated via onscreen menu boxes, XE-Term supports the full 128K memory of the Atari 130XE computer. It works with XMODEM, AMODEM, captures information and toggles between ASCII and ATASCII. XE-Term stores five phone numbers and one log-on macro sequence.

BAAUG SPEAKS OUT

by GIGI BISSON,
Antic Assistant Editor

They are willing to pay premium prices for premium software and hardware, but if they didn't get power for the price, the verbal slings and arrows flew through that cafeteria like peas in a food fight. On the other hand, almost any problem could be tolerated if a modem or communications software was inexpensive enough.

(See the Modem and Software Source List elsewhere in this issue for additional details about the most widely used products mentioned in this article.—ANTIC ED)

SOFTWARE

These Atari owners say many free public domain telecommunications programs are better than the ones sold by commercial software companies. Owners of direct-connect modems (modems designed specifically for the Atari computer and not requiring a separate interface) usually prefer public domain programs over the software supplied with their modems.

We almost got tired of listening to members extolling the virtues of 1030 Express, a public domain program written by Keith Ledbetter, a system operator (sysop) on CompuServe's SIG*Atari. They went on and on: "1030 Express is the best piece of software I've ever found." "I wish the programmer would write one for the 520ST." "The auto-dialer is simple to use, it saves three macros and there's no need to manually enter a password." 1030 Express works only with the Atari 1030 and XM301 direct-connect modems. Ledbetter's newer version, 850 Express, is compatible with the Hayes and other non-direct connect modems that utilize the Atari 850 interface.

AMODEM is the most frequently used program, but 1030 Express is clearly the best-loved. Users of the six different versions of AMODEM like the macros, ease of use and the way it supports ASCII and XMODEM protocols. But they complain about poor documentation and problems uploading with AMODEM's small buffer space. XMODEM users say the public domain program is hard to use. Sur-

Photography by Erik Weber

BAAUG members show their modems for the Antic camera.

It might seem like a crazy idea: Give Atari users a chance to tell the industry what they really think about telecommunications products. Crazy still, put those comments into print.

The Antic editorial staff paid a visit to the local Bay Area Atari Users Group (BAAUG), one of the nation's largest, and let them tell us what's wrong and right with their modems. About 100 Atari owners, some with wives, kids and even modems in tow, showed up for the meeting in an elementary school cafeteria in the

heart of Northern California's Silicon Valley.

We braced ourselves for some brutally honest comments. But the Atari users at BAAUG are quite happy, even ecstatic about their telecommunications equipment. They seem to fall into two extremes: either they own first-rate 1200 baud systems and subscribe to several online services, or they log onto local bulletin boards with public domain software and discontinued modems purchased at computer swap meets.

prisingly, none used the public domain program TSCOPE.

HomeTerm, from Batteries Included's HomePak, is the most popular commercial 8-bit program. "It's a good, dependable program. I like the macros," one user says. But another chimes in, "My macros didn't work at all." "Hometerm is easy to use, clear, menu driven and forgiving of mistakes," says Sue Tempey.

For the ST, the leaders are less clear. One user says ST Talk is the only commercial program that works. Most agree Mark of the Unicorn's PC/Intercomm "works great, but at \$124 it should." ST Term by Matthew Singer of Commnet Systems software was the second most popular.

MODEMS

A big surprise is the ongoing popularity of the discontinued Atari 1030 modem (price varies). BAAUG had few harsh words for this limited, but inexpensive peripheral.

Second most popular for both 8-bit and ST users is the industry-standard Hayes Smartmodem (\$599 for 300/1200 baud).

About half of the group at BAAUG own 1200 baud modems—and most

blamed on modems at the meeting often seem to be software compatibility problems. But a good software package can transform a mediocre modem into an online powerhouse. For example, an unmodified Atari 1030 can't auto-answer, and when used with its built-in terminal program it can't upload and download files either. However with the AMODEM 7.2 or 1030 Express program, it produces reliable file transfers.

ATARI 1030

The Atari 1030, purchased for anywhere between \$40 and \$150, was by far the most popular modem at the BAAUG meeting. "The 1030 is reliable, but it's only 300 baud and it can't run our BBS," says Kathy Standifird. On the other hand, a volunteer sysop (system operator) at the Atari BBS says 90% of Atari Corp's own bulletin board is run with an Atari 1030 modem and 1030 Express. The Atari BBS also offers 1030 Express for downloading. "That's great. How do I download it without a terminal program?" someone asked. This is the Catch-22 of free downloadable terminal software. You can, however, obtain a copy from your local users

reliable, and I bought it for only \$24." The only problem was software. "It's hard to find," she says.

This prompted a user group discussion on modular telephone plugs vs. four-pin connectors. Acoustic modems are good to use if your telephone still has an old-fashioned four-prong wall jack—you simply rest the telephone handset in a pair of rubber cups atop the modem. The more advanced "smart" modems plug directly into your phone outlet and require a modular plug. One member offers this hint: "I just unscrew the phone mouthpiece, hook on the two modem plugs with alligator clips and it works great." "I don't know about you," another BAAUG member jokes, "But I did something like that as a kid and almost got arrested." Another member suggests a device called a Blackjack that allows you to connect a modem's modular phone cord to a non-modular phone jack.

ATARI XM301

The users with Atari's new XM301 modems say it's a good value for the price (\$49.95). They like the ease of use, the fact that it's a direct-connect modem and has an auto-dial feature on the software it comes with. The only gripe is that the XM301 must be the last peripheral in a "daisy chain." But overall, as Ron Frey says, "It's small, it's cheap and it works."

MPP 1000-E

The best features of Supra Corp's MPP 1000-E direct-connect 300 baud modem are its low price, auto-dial and redial capabilities. However, users complain that it lacks a speaker, so you can't tell if you've got a busy signal, a ring, or a voice on the line. Ron Rautenberg likes the MPP because it's "small and neat looking." Some owners say the built-in SmartTerm software was the MPP's worst feature. Raymond Santiago found SmartTerm easy to use, but says the software buffer is too small and has some problems with file transfer errors when using the MPP with his Percom disk drive. In any case, the price is right—in the \$60 to \$139 range.

continued on next page

Polling modem users at BAAUG meeting.

of the remaining 300 baud owners wish they had them or plan to purchase them. "I used to own a Hayes 300 Smartmodem, but after discovering the Hayes 1200 baud modem, I'd never go back again, ever. I spend major portions of my life in front of my computer. That's too much time to waste with 300 baud," says one owner, echoing the sentiments of many.

It is sometimes difficult to distinguish the modem's performance from that of the software. In fact, problems

group or purchase it for \$10 from the Antic Catalog.

ATARI 835 ACOUSTIC

A real price buster, the old 300 baud Atari 835 was purchased within the rock bottom range of \$10 to \$19. "It's cheap. It does the job adequately when paired with AMODEM 7.1. But it's an acoustic modem so it won't auto-dial and it's awkward to use," owners say.

Why use an acoustic modem? Loretta Colbourn responded: "It's

SIGNALMAN MARK XII

"It runs AMODEM 5.0, but won't run with 850 Express or BBCS (Bulletin Board Construction Set). It's cheap, though," says Wendell Cotton who picked up his Anchor Signalman for \$25 at a flea market. Others paid up to \$99 for this 300/1200 baud modem.

HAYES SMARTMODEMS

You get what you pay for. Hayes Smartmodems, purchased at prices ranging from \$199 to \$300 for a 300 baud model and \$300 to \$595 for 1200 baud, were the second most popular brand. Indeed, the only complaint about Hayes modems was the price.

"Compatible with everything," says John Schreier, who uses it with Mark of the Unicorn's PC/Intercomm software on his 520ST. Another plus was the standard RS-232 interface, allowing people to use the same Hayes modem with both their Atari 800 and 520ST computers.

"The Hayes is reliable and has auto-dial and auto-answer capability with all good software," says Richard Anderson, who uses his 130XE for electronic banking and software uploads and downloads. "It's easy to use, has a built-in speaker, trim styling and good customer support from Hayes," says Mike Morrow, who uses it with HomeTerm on his 800XL and Chat on his 520ST. As for the 2400 baud Hayes, one user says he hasn't had any problems with a Hayes 2400 baud model he paid \$400 for at a computer swap meet, saving \$295 on the retail price.

HAYES-COMPATIBLE MODEMS

"Not all Hayes-Compatibles are Hayes compatible. I've had many problems," says Greg Humphrey, a marketing manager for Haba Corp. attending the BAAUG meeting that night.

A Hayes-compatible modem is supposed to be able to use communications software packages designed for a Hayes and utilize the same commands. It's also supposed to be "smart"—able to dial automatically and store phone numbers. Full compatibility means the modem can uti-

lize *all* the automatic features of a communications software product designed for the Hayes. Semi-compatibility means you can connect successfully only after dialing each phone number manually, and may not be able to utilize some of the software's other features. Most Hayes-compatible modems are compatible with both the ST and 8-bit Ataris when supplied with the appropriate interface and software.

VOLKSMODEM 12

Living up to its Volkswagen-type name, the Hayes-compatible Volksmodem 12 from Anchor Automation got raves for its reliability and simplicity. "I like it, it's real cheap," says Corey Cole who paid \$150 and uses it with the Flash terminal program on his ST. Norman Maxwell, who paid \$79 for his Volksmodem, uses it to control his robot with a 520ST and the ST Talk program. This non-direct connect modem is also compatible with the 8-bit Ataris.

RACAL-VADIC

Three members use the Racal-Vadic 1200 modem with the 520ST or the Atari 800. The price ranged from \$249 to a whopping \$900 for a variable-speed Racal-Vadic 1545 purchased eight years ago. No complaints here. Users say the Racal-Vadic is "smart," fast and supported by a good company.

U.S. ROBOTICS

The 1200 baud, Hayes semi-compatible U.S. Robotics/Password modem is the modem of choice for BAAUG president Frank Nagle who uses it with his 520ST and PC/Intercomm software. The \$300 modem lacks a volume control. Pluses are auto-dial and pulse/tone dial options. AMODEM 4.9 software supports all of its features.

BIZCOMP INTELLIMODEM

"I like the line-quality lights so you don't waste time downloading junk," says Glen Elliott, who uses his Bizcomp Intellimodem with HomeTerm software. The 1200 baud Hayes-compatible modem manufactured by

Business Computer Corp. of Sunnyvale, CA retails for \$400. "But it's not truly Hayes-compatible," complains Mark Blomenkamp, who uses it with AMODEM software.

PROMETHEUS 1200

Four have Prometheus Promodems, purchased for anywhere between \$299 and \$380. The best features are auto-dial and auto-redial abilities, phone directories, adjustable baud rate and a clock display. However, one user says the clock must be reset every time it's powered up. Another, Steve Heacock, says the Prometheus has different status numbers than the Hayes, although it's the same command set. Other drawbacks reported: it won't work with Bulletin Board Construction Set and gets very hot after being on for only 15-20 minutes.

AVATEX

E+E Datacom's Avatex modem is 95% Hayes compatible. "Which 5% are you missing?" someone wondered out loud. The 300/1200 baud model retails for \$199.95, but it has recently become available for users group multi-unit purchases at under \$100. The Avatex is advertised as being fully compatible with HomeTerm, but is apparently only partially compatible with DiskLink and TSCOPE software. Scott Tretyl, who purchased his Avatex for \$100, likes the auto-dial capability when he uses it with AMODEM 7.2, but laments it lacks a speaker.

THE IDEAL MODEM

In all, users at the meeting says that the ultimate modem and software combination would be a Hayes-compatible auto-answer, auto-dial modem compatible with a variety of terminal software and computer systems. And all this for a price under \$200. The communications software should use macros, store 10 phone numbers, support graphics and above all, be invisible to the user. Says BAAUG member Jon Rogers, "I want to communicate, not manipulate software."

Manufacturers, are you listening?

Going Online

continued from page 15

Beyond this are multi-user regional networks—larger than a BBS, smaller than CompuServe. One is The Well, a Northern California network operated by the publishers of the *Whole Earth Software Review*. (\$8 a month plus \$2 an hour, (415) 332-6106.)

LETS CALL A BBS

We'll call BUG—the Boise Atari Users Group BBS—because they have a list of over 1,000 BBS telephone numbers to browse through or download. If you don't live in Boise, Idaho, you'll need to pay a long distance telephone charge to call the BUG BBS—but, unlike CompuServe or any other multi-user commercial online information service—you will not be billed an hourly fee or "connect charge."

First "tell" your modem program to dial BUG at (208) 383-9547. (Type 2083839547—no dashes) With Express 850, we type E.

If your modem has a speaker, you'll hear it dial. When you finally connect (be patient), press [RETURN]. "Garbage" characters may appear on screen as the modem tries to determine the baud rate of the BBS—we got loads of them while researching this article.

Then select the right Atari mode from your modem program's software menu. Go to your software's Function Menu and choose ATASCII, the mode that the BUG BBS requires. Leave the program menu and press [RETURN]. The title screen appears:

WELCOME TO BUG

Most bulletin boards use commands that are very similar to those on CompuServe. To stop scrolling, hold down the [CONTROL] key while you type S. To start again, it's [CONTROL] Q. Type [CONTROL] X to quit. (Boldface type represents what *you* type in.)

```
Enter your Name >Charlie Jackson
From City,State >San Francisco, CA
You are CHARLIE JACKSON
Calling from SAN FRANCISCO, CA
CORRECT <Y/N>Y
Logging caller No. 20946 to disk. . .
```

```
-On Thursday 05/15/86 13:30:25 MDT
(^ =CTRL) ^ S PAUSE, ^ Q RESUME, ^ X QUIT
->ATARI BBS LIST IN 'O' SECTION<-
```

This is what we want! BUG will display current notes, bulletins & greeting messages. Then it will ask you:

```
First time on this BBS?
<Y/N>Y
```

If this is your first visit to BUG, type Y. Now we see a detailed introduction, along with some helpful hints. After this scrolls past, we're asked to make our selection:

```
Selection . . . (?=Menu) ->
```

(To look at the menu, press the ? key.)

```
ONE MOMENT CHARLIE JACKSON,
GETTING FILE:
MENU.DAT
```

This is the BUG command menu:

```
(A)TASCII/ASCII switch (B)ulletins
(C)allers file (D)ownload
(F)iles for download (G)oodby
(H)elp file (I)nformation
(L)inefeed on/off (M)essage base
(N)ew user file (O)ther files
(P)ivate mail (T)ime
(U)pload a file (V)alley users
(W)elcome sign-on (X)pert user
(Y)ell for Sysop (?) -This menu
```

```
Selection . . . (?=Menu) ->O
```

Choose the O option for the BBSLIST. Now you'll see a directory of files you can download from the O section:

DIRECTORY— DOUBLE DENSITY SECTORS

```
COMDEX3 031
BBSLIST 078
ATRIBITS 013
CESWRAP 029
BBS1030 008
ONEMEGST 050
<RETURN>=EXIT
FILE NAME=>BBSLIST
```

Type in BBSLIST, the name of the file we want to download. Then, BUG asks us:

```
Christensen XMODEM protocol? <Y/N>Y
```

(Nearly every modem program is able to use this method of download-

ing files. XMODEM protocol is desirable because it recognizes and corrects any "noise" or interference on the telephone line.)

```
READY TO SEND BBSLIST.TXT
```

```
^ X TO CANCEL.
```

BUG is waiting to send you the file—but it won't wait long. Quickly, go back to your modem software's Function Menu.

BACK TO EXPRESS

This procedure varies between modem programs, but usually it involves three things:

1. Call up your modem program menu. (With Express 850, we press the [SELECT] key.)

2. From the menu, choose the command to receive a file using XMODEM. (With Express, we type R.)

3. Type in a filename for your computer to use when it begins to store the incoming data.

4. [RETURN].

If you're using Express 850, the download will begin automatically. Make sure you have a formatted disk in your drive to save the program to. (Other programs, such as HomeTerm and BackTalk require you to press a console key to begin a file transfer.)

As Express 850 downloads the file, words will flash by on the computer screen. On the top of the screen, where BUFFER: appears, the number should be increasing as the file is sent.

After your Atari has received the file, it automatically stores it on disk using the filename you typed in earlier, and brings you:

BACK TO BUG

To exit BUG, type G (goodbye) at the Selection . . . (?=Menu) -> prompt. Turn off your computer, boot up your word processor (such as PaperClip or AtariWriter) and read your list of 1,000 bulletin boards. That should keep you busy for awhile. . .

If you compute after dark...

...switch to the magic of GENie™ and stay on-line longer, for less!

Introducing GENie, the General Electric Network for Information Exchange. It's part of General Electric Information Services—the largest commercial teleprocessing network.

Now the power of GENie stands ready to bring a little magic into the life of PC owners just like you. And for potentially much less than other on-line information services.

With GENie, you pay no hidden charges or monthly minimum fees. You pay only for the actual time you're on-line and the \$18.00 registration fee. Nothing more.

Compare & Save

	Services						Pricing			
	SIGs/User Groups	Electronic Mail	CB Simulator	Computing News	Games	2400 baud access	Registration fee	Monthly minimum	Non-prime time rates	
									300 baud	1200 baud
GENie*	X	X	X	X	X	X	\$18.00	none	\$5.00	\$5.00
CompuServe	X	X	X	X	X	X	\$39.95	none	\$6.25	\$12.75
The Source	X	X	no	X	X	X	\$49.95	\$10.00	\$8.40	\$10.80

*Rates and Services shown in effect 12/85. Non-prime time rate applies Mon–Fri, 6pm–8am local time, all day Sat., Sun., and nat'l. holidays. Subject to service availability. Additional surcharge applies for 2400 baud service.

Save up to 60%

Check out the chart above and compare it for yourself. You'll find GENie can deliver all of your favorite services for an incomparable price at incomparable savings!

Put the power of GENie at your command

- Discuss the latest in computer products and accessories or download public domain software with GENie's *RoundTable™ Special Interest Groups*.
- Meet new people, share ideas with friends—old and new—with *LiveWire™*, GENie's CB simulator that has everybody talking!
- Get your message across and back again with *GE Mail™*, GENie's electronic mail service.
- Organize a local, regional or national get-together in one of GENie's 40 "conference rooms" with GENie's *Business Band Real-Time Conferencing*.
- Go one-on-one with classic computer games, match your wits against others with multi-player games, or download for future play in GENie's *Game Room*.
- Stay in touch with what's new on the microcomputer scene, courtesy of GENie's news service, *News and Commentary*.

GENie can take you to new highs in speed and keep you there. Because our non-prime time rate for 300 OR 1200 baud is only \$5.00 an hour. And that means you save 20 to 60%. Or if you prefer, 2400 baud service is now available.

With services and prices like these—talk, read, learn, or play to your heart's content. Because now you can keep your eyes on the screen, not on the clock.

With your personal computer, modem, communications software, and telephone, you already have everything you need to make GENie come to life. So why not Sign-Up today. Let GENie bring a little magic into your life!

Sign Up From Your Keyboard Today 4 Easy Steps:

1. Have ready your VISA, MasterCard or checking account number to set up your personal GENie account.
2. Set your modem for half duplex (local echo)—300 or 1200 baud.
3. Dial 1-800-638-8369. When connected, enter HHH
4. At the U# = prompt, enter XJM11947, GENIE then RETURN.

No Modem Yet? Need more information or assistance? We can help! Call 1-800-638-9636, ext. 21.

Get on-line with GENie. And stay longer, for less.

General Electric Information Services Company, U.S.A.

\$5 TALKING DISK

OVER 100 WORDS in vocabularies that you can put into your own programs! No extra hardware required. Sample programs include:

- Talking four-function calculator — choose English, Spanish, or German.
- Talking keyboard — letters and punctuation in English.
- Demonstration of voice editing.

The \$5 Talking Disk is available for Commodore 64, 128, Atari 800, 800XL, 130XE, and Apple II+ (64K), IIe, and IIc.

If you want to make your own vocabularies, in any language or accent, then you must have a VOICE MASTER for processing speech input. VOICE MASTER lets you do much more: YOU CAN RECOGNIZE SPOKEN COMMANDS and WRITE MUSIC AS YOU HUM! And affordable too — under \$90 including the headset and microphone.

Send \$5 for the talking disk. Prepaid orders only. Includes postage. (\$7 outside USA, Canada, and Mexico.) Information on VOICE MASTER will accompany your disk. Or you can call or write for VOICE MASTER information separately. Please specify computer make and model with your order.

AMAZING PRODUCTS

from

ATARI Computer Software Services ATARI

Computer Software Services has been busy! We now have available 20 truly AMAZING products for your ATARI computer or disk drive... several of which have been reduced in price! Below are only 4 of our most recent products... each representing outstanding values for your dollar. Call or write for our FREE catalog today!

The "KLONE!" Just \$89.95 (\$69.95 if you purchase(d) an "IMPOSSIBLE!" from us!)
The "KLONE!" is a simple to install circuit board (no soldering) for Atari 1050 disk drives. It transforms your 1050 into a Super-Powerful disk backup device with hi-speed and true double density capabilities. Now you can copy most of your heavily protected program disks quickly and simply! Copies will run on any Atari 400/800/XL or XE computer.

The "RICHMANS" 80 COLUMN Word Processor! Just \$59.95
The "RICHMANS 80 COLUMN Word Processor!" would be well worth its price if it were only a 40 column program... the fact that it gives you a FULL 80 COLUMNS on the SCREEN makes it almost unbelievable! No hardware modifications required for XL/XE Computers (400/800 must have at least 52K RAM). For even greater flexibility we've made this program "RAT" (or mouse) compatible. Very powerful yet simple to use!

The "FUZZY/PHANTOM Sector Maker!" Just \$29.95
FUZZY OR PHANTOM sectors are not copyable/reproducible by any disk duplicating device (except for the "IMPOSSIBLE!" or The "MIRACLE!")... and probably never will be! This "software only" program will allow you to make your own FUZZY/PHANTOM sectors so that you can now make working copies of those "uncopyable" programs... and you can make them with any "unmodified" disk drive!

The "MIRACLE!" Just \$69.95
The "MIRACLE!" is a "software only" version of the "IMPOSSIBLE!" Now you can backup "protected" disk programs without hardware in your computer or disk drive (works with XL or XE computers and any brand disk drive!) The "XL-FIX!" and "XL-Mate!" are included at no extra charge. The "MIRACLE!" will not copy as many programs as the "IMPOSSIBLE!" (about 75% efficient), but at only \$69.95 it's an outstanding value... some would even say a Miracle!

Write or phone for additional information and various price reductions on selected products. DEALER/DISTRIBUTOR/USER GROUP inquires welcome! Phone (761) 467-9326.

A REVOLUTION IN FLYING

THE MicroFlyte JOYSTICK

A unique product designed for use with FLIGHT SIMULATOR II™ to give you accurate and proportional control. Includes control Yoke, Throttle, Flaps, Brakes, Gun and Elevator trim.

OTHER FEATURES:

- Software program drivers for other Flight programs available soon
- Use with User generated BASIC programs
- Use with User generated assembly language programs

This is the ONLY fully proportional, continuously variable joystick control for Flight Simulator II. Now your home computer can be a truly realistic flight simulator.

"...I flew all over the map with one landing after another and no mishaps." K.C.

"...I am getting more use out of Flight Simulator now and will continue thanks to your joystick" R.T.

WARNING: Use of the MicroFlyte joystick may cause Flight Simulator addiction. Order with caution.

NOW AVAILABLE DIRECT FROM MICROCUBE

TIRED OF USING YOUR 8-BIT ATARI AS ONLY A GAME MACHINE?

Then now may be the time for *you* to start programming and discover the real power of your Atari Computer. For years, the Atari Computer has been deemed nothing more than a "game machine." But we at OSS believe otherwise. And that is why we have been producing programming languages for the Atari ever since the first Atari 800 was sold.

Why programming? Because programming opens up a whole new world to you, a world you may have never dreamed possible. Programming allows you to be creative and write programs the way you want them to run. Even as a hobby, you will discover the many challenges that programming has to offer. But the single most rewarding aspect of programming is the self-gratification derived from watching *your* completed programs run.

But there's more to programming than that. Like anything else, you need a solid foundation or good starting point. OSS has provided and delighted thousands of Atari owners with just that. With products like **BASIC XE**, **BASIC XL**, **ACTION!** and **MAC/65**, OSS has long been recognized as the leading supplier of "systems software" for Atari Computers.

Trust OSS to start you off with the right programming language for you. OSS also produces programming aids for **BASIC XL**, **ACTION!**, and **MAC/65** in the form of ToolKits, saving you hours of programming time by supplying you with a wide variety of prewritten subroutines, demos, and more! So don't let your Atari Computer gather dust in your closet because you're tired of playing or have mastered a particular game. Discover the world of programming, and surprise yourself.

For Beginners and BASIC Programmers:

BASIC XL—An excellent choice for everyone from beginner to expert. This version of BASIC adds over 50 commands to Atari BASIC and will run on all Atari 8-bit computers. Super Buy! **\$59.00**

BASIC XE—As with BASIC XL, this version of BASIC comes complete with built-in Player/Missile Graphics support. BASIC XE is designed to utilize the extra memory in the 130XE, but will operate on XL Computers as well! Quality at its best! **\$79.00**

For Intermediate to Advanced Programmers:

ACTION!—A high-level language that's so fast and exciting that we had to call it ACTION! ACTION! incorporates the best features of Pascal, C, and Algol. A Great buy! **\$79.00**

MAC/65—A full-featured Macro Assembler complete with integrated debugger. Hundreds of commercially produced software has been written using this brute. Surprisingly Powerful! **\$79.00**

Call or write for a free brochure!

Atari is a registered trademark of Atari Corporation. BASIC XL, BASIC XE, ACTION!, and MAC/65 are trademarks of OSS, Inc.

*Ultimate
type-in
character
editor*

ULTRAFONT

Program by STEVEN LEE

Article by CHARLES JACKSON, *Antic* Program Editor

UltraFont may be the most powerful character set editor ever published as an Atari type-in program. It lets you create, display and manipulate character sets, or "fonts"—as many as six characters at a time—in any of five graphics modes. This is an all machine-language program that you type in as a self-converting BASIC data file. (Antic Disk subscribers will find a bonus of several character fonts on this month's disk.) UltraFont runs on all 8-bit Atari computers with at least 24K memory, disk or cassette. A joystick is required.

If you've ever played Space Invaders, worked with a word processor such as PaperClip, or seen *Antic's Color The Cover* contest winner (June, 1985), you've seen redefined character sets (fonts). Using a redefined character set is very similar to using a different typeface on your printer.

A character set is a list of instructions which tells your computer how to draw characters. For example, the numbers 0, 24, 60, 102, 102, 126, 102, 0 tell the computer how to form

the letter A. These numbers, when written in binary notation and stacked one on top of the other, form a "stencil" of the letter A:

```
0 00000000
24 00011000
60 00111100
102 01100110
102 01100110
126 01111110
102 01100110
0 00000000
```

continued on next page

If we place our stencil over a blank video screen, and turn on only pixels (picture elements) underneath a number 1, our image (bitmap) looks like this:

```

0
24      * *
60      * * * *
102     * *   * *
102     * *   * *
126     * * * * * *
102     * *   * *
0

```

We can alter the appearance of our letter A by altering the instructions the computer uses to draw it. If we changed all the 102's to 126's, for example, the A would look more like a house:

```

0
24      * *
60      * * * *
126     * * * * * *
126     * * * * * *
126     * * * * * *
126     * * * * * *
0

```

If we change our A to resemble a spaceship, we have the beginnings of a Space Invaders game. If we redefine the characters A, B and C to resemble a man beginning to take a step, a man in mid-step, and a man completing a step, we can create a simple animation sequence. Of course, our animation sequence could not display any words which used the letters A, B, or C—in any text message, these characters would also appear as stick figures.

As you might expect, creating and using redefined character sets from scratch is not all that easy. The Atari's character set starts at memory location 57344 (\$E000) and continues through 58367 (\$E3FF). This 1024-byte block of memory is permanently carved in ROM, and cannot be changed.

The trick here is to copy the *entire* character set from ROM into an appropriate place in RAM, where we can alter it. Then, we tell the computer to

use our RAM-based character set, instead of the one in ROM. Once in RAM, we can redefine any or all of the 128 non-inverse characters.

The computer uses the non-inverse character set as a template for creating the inverse set. Thus, if you redefine a capital M, your inverse capital M also gets redefined.

You can design a redefined character set with a pencil, a pocket calculator, and several reams of graph paper. This is known as "doing it the hard way." Fortunately, there are many speedy programs known as "character font editors" that help you design your own redefined character sets, show you what your completed character set will look like, perform the necessary calculations and SAVE the set to a nine-sector disk file.

UltraFont is a full-featured font editor, the most powerful type-in character editing program ever published in **Antic**. The program's Edit window can accommodate up to *six* charac-

*If you played
Space Invaders
or worked with a
word processor,
you've seen
redefined
characters*

ters and works with GRAPHICS 0, 1, 2, 12 and 13 (ANTIC modes 2, 6, 7, 4 and 5, respectively).

TYPING AND LOADING

Type in Listing 1, CHARFONT.BAS, check it with TYPO II, and SAVE a copy before you RUN it. When RUN, the program asks whether you want to create a [D]isk version or a [C]assette version of the program. Choose [C] and the program will create a machine-language boot tape. Choose

[D] and it will create a 55-sector object file called CHARFONT.OBJ. If you're using a disk system, be sure your disk has at least 55 free sectors. Be patient; CHARFONT.BAS requires about six minutes to create the new file.

Antic Disk subscribers will find a copy of CHARFONT.OBJ on the monthly disk. As a bonus, you'll also get several complete sample character fonts.

Cassette owners: Once you've created the object file, rewind the tape and press PLAY on your program recorder. Next, hold down the computer's [START] key while turning on the computer. (XL/XE owners should also hold down the [OPTION] key.) Press any key and the program should load and run.

Disk owners have two options: First, remove all cartridges, insert a disk with the DOS.SYS and DUP.SYS files, and turn on the computer. Again, XL and XE owners should hold down the [OPTION] key during this process. When the DOS menu appears, use the [L]oad File option to load and run CHARFONT.OBJ.

Disk owners may also choose to copy the CHARFONT.OBJ program to another disk and name it AUTO-RUN.SYS. Now, just insert this disk into the drive, turn the computer on (XL/XE owners press the [OPTION] key) and the program will autoboot.

USING THE PROGRAM

The main screen is divided into three windows. At the top, the Drawing window holds your Edit screen, a grid on which you plot your characters. The little white marks at the top of this screen show you where each character is divided. The pink line at the bottom of the screen indicates the position of your drawing cursor.

The Selecting window (in the middle) displays the complete character set. Move the cursor over any character and press the joystick button to bring it into the Edit window.

The bottom window shows what your character will look like when viewed in any chosen graphics mode.

COMMAND SUMMARY

This program has more than two dozen commands. Fortunately, you only need a few to get acquainted with it. To operate any of the following commands, all you need to type is the letter or symbol shown inside the square brackets []. For example, if you've never used this program before, you'll probably want to type an [H] or a [?] to access the [H]ELP screens.

[E]DIT— This command alternately moves your cursor between the Edit window and the Drawing window.

[B]LANK— Changes a series of characters into blank spaces. Place the cursor on the first in a series of characters to erase, press the joystick button, then place the cursor on the last character in the series and press the button again. All of the characters in this range will be changed into blank spaces.

[R]ESTORE— Changes a series of characters back into their original, unaltered forms. This command works the same way as the BLANK command.

[C]OPY— Makes multiple copies of a single character. Move the cursor over the character to copy and press the joystick button. Now, place the cursor over any other character and press the button. This erases the current character and replaces it with a copy of the first character. Press the [ESCAPE] key to leave this mode.

[K]OLOR— Multi-colored characters are rarely used in word processing programs. However, when redefined to look like rockets, aliens and landscapes, they are frequently used in games. ANTIC modes 4 and 5 are four-color character modes designed for this purpose. To adjust the colors of your character, first press the number (1-5) of the color register you wish to alter. Once you've selected a color register, move the joystick left and right to adjust the color value. Move the joystick up and down to adjust the luminance value. Press the joystick trigger to choose another color register to alter.

[F]LIP— Changes the characters in the Edit window into their mirror-images.

[I]NVERT— Inverts the characters in the Edit window.

[G]RID— Lets you choose the size of your Edit window grid. The maximum window size is 6x6. Since the screen is not large enough to display a grid of this size, the program uses a 6x2 window to scroll vertically through the grid. When using

This is the most powerful type-in character editing program we've ever published

Graphics 2 or ANTIC mode 5, it's best to use a grid no bigger than 6x4.

[A] TOP— Moves the cursor to the top of the Edit grid.

[Z] BOTTOM— Moves the cursor to the bottom of the Edit grid.

[X] SWITCH— Alternates between two characters. This function is useful for creating animation sequences. Press the [ESCAPE] key to exit this mode.

[] INVERSE— Change the current display to inverse video.

[M]ODES— Select from available graphics modes—Graphics 0, 1, 2 and ANTIC modes 4 and 5.

[S]ELECT SET— Alternate between the built-in character set and the redefined set you're working on.

[P]UT SET— Shows what your character set will look like in the graphics mode you've chosen. Remember that Graphics 1 and 2 only use the lower half of the character set. Press the [ESCAPE] key to exit this mode.

[U]NDO— Restores the characters back to their original form.

[>] UPDATE UNDO— Update the characters to the current data. It's useful when you're making uncertain

changes.

[W]RITE DATA— Scans for characters you've redefined, then writes the data for those characters to disk, tape, printer, or screen. If you write the data to disk or cassette, you may also choose to write this data as source code. This option will generate either BASIC DATA statements, or Assembly language .BYTE statements. The computer asks you for a starting line number, the language you want to use (BASIC or Assembler), and a SAVE filename for the resulting file. When you're done, simply ENTER the resulting file into your program.

[D] INPUT DATA— This function lets you type in the numbers to form a character, instead of drawing it with a joystick. This is useful if you've already calculated the eight numbers needed to redefine a character. Just choose the first character to change and type in those eight numbers. Press [RETURN] and you'll be prompted to type in the data for the next character. If you don't want to change that character, press [RETURN] to skip that character, and edit the next one. Press the [ESCAPE] key to exit this mode.

[-] SHIFT UP— Shift the characters in the Edit grid up one position. Bits in the top row will wrap around to the bottom row.

[=] SHIFT DOWN— Works like SHIFT UP, but moves the characters UP, but moves the characters left by one position.

[+] SHIFT LEFT— Works like SHIFT UP, but moves the characters left by one position.

[*] SHIFT RIGHT— Works like SHIFT UP, but moves the characters right by one position.

[1] SLOW— Decreases the speed of the drawing cursor.

[2] FAST— Increases the speed of the drawing cursor.

CONSOLE KEY COMMANDS

[OPTION]— Displays a disk directory from any selected disk drive.

[SELECT]— Loads a previously-saved character set. Will also load character sets created by most other

continued on next page

editors.

[START]—Saves the current character set and the values of the five color registers.

GET THE MOST

If you only want to redefine a few characters, put your cursor in the top screen on the character you want to change, press [E] for Edit, select the character you wish to replace it with, and press the joystick trigger. This will perform an UPDATE on the character set information. Now you may continue drawing.

Use the right half of the bottom screen to see what your characters will ultimately look like. The bottom left portion displays your characters in inverse video. Remember that GRAPHICS 1 and 2 use only the lower half of the character set. Normally, you cannot display lower case or inverse video letters in these modes. Instead, the characters will be displayed in different colors. For example, in

Graphics 1 an uppercase, non-inverse "A" will look just like a lowercase, inverse "a"—except the two will be displayed in different colors.

In ANTIC modes 4 and 5, the color register for playfield two (location 710, \$02C6) is not used in inverse video. Playfield three, (location 711, \$02C7) is used instead. This gives us

UltraFont has more than two dozen commands

five colors to work with, although we can only use four in any one character.

COLOR REGISTERS AVAILABLE
NON-INVERSE
COLOR0 (location 708, \$02C4)
COLOR1 (location 709, \$02C5)

COLOR2 (location 710, \$02C6)
COLOR4 (location 712, \$02C8)
INVERSE
COLOR0 (location 708, \$02C4)
COLOR1 (location 709, \$02C5)
COLOR3 (location 711, \$02C7)
COLOR4 (location 712, \$02C8)

You can also merge two character sets into one. Just put as many as 36 characters of the first set into the Edit grid, load in the second character set, and use the [U] UNDO command to link the two sets.

Antic readers will certainly discover many other creative ways to unleash the power of UltraFont. Don't forget to write and tell us what you have created.

FLOPPY FILER

Organize your fast-changing disk files. This useful BASIC program creates a paper printout of the file directory—exactly as it appears when you call the disk directory to screen. Slip the directory card into your disk envelope and find every program at a glance. Works on any 8-bit Atari computer with disk or cassette.

Handy disk directory printouts

by ROBERT BLANEY

As you use your Atari more to organize your life you'll find something else to organize—your disks. If you trade programs, download from bulletin boards and develop your own programs like I do, you probably spend too much time labeling diskettes—and relabeling diskettes. And if you have 10 or 20 programs or files on a disk, it takes time to write each filename by hand—let alone find enough space to scribble all the filenames for a double-sided disk on a single label.

No more scribbling with felt-tip pens. Floppy Filer is here. In seconds, this simple program prints a paper insert that you cut to size (along the dotted lines) and slip into the disk envelope. Your disk directories now become easily visible and are easily

No more scribbling with felt-tip pens. The program prints paper inserts that you slip into the disk envelope

updated. The filecard displays the name and size (in sectors) of each file, the total number of files on the disk, the number of free sectors and the date.

USING THE PROGRAM

This program requires a printer that can print at 6 and 8 lines per inch (lpi) to create the correct size insert. The listing is written for Epson, Star and Gemini printers. If you do not have an Epson or compatible, but your printer *can* print at 6 and 8 lpi, you will need to know your own printer's control codes for 6 and 8 lpi. The listing needs these codes at line 490 for 8 lpi and line 600 for 6 lpi. These *must* be changed before you use this program.

Type in Listing 1, DSKINSRT.BAS, check it with TYPO II, and SAVE a copy before you RUN it. After the title screen graphic of a floppy disk appears, simply follow the prompts. Insert the disk for which you want to create a filecard into the disk drive and press [RETURN]. Now type in the title you want to give the directory—it can be up to 38 characters long—and then [RETURN]. The Blaney Family has developed a habit of writing titles that provide useful information such as which DOS and density are on the disk and whether BASIC is needed.

Even if you don't want a date on the

HOW PEOPLE WITH COMMON INTERESTS FIND AN INTERESTING COMMON GROUND.

Presenting CompuServe Forums. Where people from all over get together, without even leaving home.

Now thanks to CompuServe Forums, computer owners are sharing common interests by talking to each other through their computer keyboards. *Software users, computer enthusiasts, ham operators, french cooks, fire fighters, science fiction lovers and other special interest groups* are already in touch, online.

Because when you subscribe to CompuServe, you're able to reach people who want to talk about the things you do. As many people as you like. For as long as you like. Whenever you wish.

Join a conversation already in

progress or start one on your own. Ask questions. And get answers.

All it takes is a modem, most any personal computer and CompuServe.

Forum members across the country are as close as a local phone call.

You can go online with just a local call in most major metropolitan areas. And normal usage fees for weekday nights and weekends are just 10¢ a minute.

Of special interest to all Forum participants is software that's FREE for the taking.

Public domain software. For all sorts of activities, from games to business programs. And it's just as easy to copy a piece of software as it is to participate in a Forum.

Become a CompuServe subscriber and get a \$25 Usage Credit to start you off.

Becoming a subscriber is as easy as contacting your local computer dealer. Or you can call us and order direct. Suggested retail price is \$39.95.

And if you'd want more information about CompuServe, we'll be happy to send you a free brochure. Because with all that CompuServe offers—we think it's in your best interest.

FILE MASTER

This useful database for disk directories sorts files alphabetically, by disk number, file type, file name extender, or number of sectors in the file. The BASIC program works on all 8-bit Atari computers with at least 32K memory and a disk drive.

Many Atari owners face this common problem, trying to find a specific program among dozens of disks containing hundreds of programs. After countless hours of fumbling around shoeboxes full of disks, I decided to solve the problem once and for all. The result is File Master, a program which sorts files alphabetically or by disk number, file type, file name extender, or number of sectors in the file.

USING THE PROGRAM

Type in Listing 1, FILEMSTR.BAS, check it with TYPO II, and SAVE a copy before you RUN it. In line 2630, the 800 can be changed to another number, depending on the number of files you expect to index.

Never fall victim to disorganized disks again

File Master first shows a brief title page and then the main menu. The choices are similar to those in Broderbund's Print Shop. Select a function by using the up-arrow and down-arrow. (You don't need to hold down the [CONTROL] key.) Press [RETURN] to begin the function you selected. Most of the program is menu-driven and has self-explanatory onscreen prompts.

No more disk disorganization

by JASON WORLEY

On the main menu, the following options are available:

- Add Records
- Display Indexes On Screen
- Print Indexes In Memory
- Sort Indexes In Memory
- Save Indexes To Disk

- Load Indexes From Disk
- Delete Index Disk File
- Delete Index From Memory
- Clear Memory
- Exit Program
- Display Current Directory
- Change Drive Number

continued on next page

Records may be added at any time. The Add Records selection gives you a prompt for disk name and number and then asks if you want to print labels for the disk. You can also choose from a list of one-letter headings to identify each file as a utility, game, etc. You can change these headings to suit your own needs.

Choose the Print Indexes selection to print a current list of indexes in memory to either the screen or the printer. The Sort sub-menu works like the main menu; use the up-arrow and down-arrow keys to select an option, and start it by pressing [RETURN]. The Save and Load options will prompt you for a file extension of three characters or less.

Delete Index File erases a previously saved index and prompts you for a file extension. Delete Index From Memory erases one disk directory from the rest of the indexes. Actual deletion won't happen until the file is saved back to the disk.

Clear Memory should be used carefully. It permanently erases all indexes

Sorts files alphabetically, by disk, type, extender or sectors

which have not been saved to disk. The program asks you to verify this choice as an added precaution.

To see what files are on the disk currently in the drive, choose the Display Current Directory option. And finally, the Change Drive selection switches you to another disk drive.

PROGRAM TAKE-APART

File Master will work on any Atari with at least 32K RAM. If your Atari has more memory, the program is smart enough to use the extra RAM for sorting more records. However, File Master cannot access the extra 64K of RAM in the Atari 130XE model.

The unsorted data is kept in AREA\$

and is DIMensioned according to the amount of free memory in your Atari. This routine is in lines 2625-2630.

To speed things up, the sorting routines show up early in the program (lines 60-130). The screen also turns off to make the sort go faster and you are told approximately how long the sort will take. For the sake of simplicity, I purposely left out any machine language sorting routines. I think readers can benefit by seeing how a sort is accomplished in BASIC.

For the most part, I have left the program open so you are free to learn from it and experiment with changes. Have fun tinkering with File Master, and never fall victim to disorganized disks again.

Jason Worley is 15 and attends Washington High School in Tulsa, Oklahoma. He has written many programs in BASIC and ACTION! with his Atari 800 during the past four years.

BATTLE OF ANTIETAM

“HIGHLY RECOMMENDED”
“MORE THAN FIRST RATE”
“EXCELLENT GAME”
“REVOLUTIONARY”
“A TRUE CLASSIC”
“A MUST”

These were some of the words magazine critics used to praise Battle of Antietam.™

Now, they're going to need even stronger superlatives to describe our new game —

GETTYSBURG: The Turning Point.™

After the long months of hard work it took to create *Battle of Antietam*, we knew we had a very special winner on our hands. We're happy to see that the gaming public feels the same way:

“Battle of Antietam...marks a long awaited return by (SSI) to the Civil War. Let's just say it was worth the wait...Inside (the package) you'll find ...one of the most complete manuals to be found in computer gaming. And we do mean complete!...SSI and the authors have created more than a first rate grand tactical simulation....They have captured some of the look and 'feel' of Civil War combat, and it shows.”

— **Computer Gaming World, April 1986**

“Battle of Antietam is a must for anyone with even a mild interest in the Civil War. The simulation is easier to understand than many others of its kind...it's more than just another game.”

— **COMPUTE!'s Gazette, June 1986**

“Like all SSI games, Battle of Antietam has been meticulously researched and is a tactical game on a grand scale... SSI has produced dozens of computer war games, gathering praise from many sources. Battle of Antietam, however, may transcend previous efforts and become a true classic.”

— **COMPUTE! June 1986**

“Battle of Antietam is highly recommended...highly absorbing and a superb presentation of one of the most historic battles of the Civil War.”

— **Computing Today! May 1986**

Needless to say, we're pleased by this flood of compliments. But at SSI, we're our own harshest critics, which is one reason SSI continues to be the acknowledged leader in computer wargaming. We immediately set out to create another Civil War game that further raises the standard for strategy simulations. The proud result is *GETTYSBURG: The Turning Point*.

Advertisers have been accused of stretching their imagination to come up with incredible superlatives. Get ready to stretch yours after you've picked up a copy of these two games from your local computer/software or game store.

If there are no convenient stores near you, VISA & M/C card holders can order *Battle of Antietam* (\$49.95) and *Gettysburg: The Turning Point* (\$59.95) directly by calling toll-free **800-443-0100, x335**. To order by mail, send your check to: **STRATEGIC SIMULATIONS, INC.**, 1046 N. Rengstorff Ave., Mountain View, CA 94043. (California residents, add 7% sales tax.) Please specify computer format and add \$2.00 for shipping and handling.

All our games carry a "14-day satisfaction or your money back" guarantee.

Ward Schumaker

Part Lunar Lander and part Joust, Bumblebee is an intriguing flying game that you'll find a lot trickier than it seems. This BASIC program works on all 8-bit Atari computers of any memory size, with disk or cassette.

Buzz, buzz, buzz! You are a Bumblebee—a flower-eating mutant bumblebee—and your straightforward goal is to remain airborne forever.

However, your food intake has drastic effects on your ability to keep flying. Lose too much weight and you'll go to bee heaven. Gain too much weight and you'll probably end up in the other place. You must maintain a delicate balance and a reasonably good sense of direction while avoiding poisoned flora in order to keep alive and buzzing.

You'll need a joystick to keep the bee away from the top and bottom of the screen, from which it will bounce like a jai alai ball. You get only three bounces before the bee dies and the game is over. And don't think you can

BUMBL BEE

by EDDIE CARSTENS

take refuge in the sides of the screen either—they're flypaper.

It's easy to tell a good flower from a bad one. The red ones are nutritious—you'll be awarded 10 points per meal (and an extra bounce off a side for every 50 points), but you'll gain an extra gram of body weight. The green ones are toxic, and contact with them makes a bee giddy. Toxic

nectar changes your direction, reversing both horizontal and vertical velocity. You could easily be thrown into other green flowers if you aren't careful. Hit a green flower on your last bounce and you're one dead Bumblebee.

Your Bumblebee can only buzz hard enough to support 10 grams. In fact, three to six grams is the optimum weight for flight control. Above six, you'll be fat and difficult to maneuver. And below three, you could starve. You don't want to float away like a helium balloon, but you certainly don't want to hit the surface at any great speed either.

Lunar Lander fans will be on familiar ground with Bumblebee. The kind of control between eating and weight maintenance is the same as that between rocket thrust and the moon's gravity. The joystick button produces a flapping noise, and the function is similar to the rocket thrust in that it makes the bee hover and prevents it from falling.

ABOUT THE PROGRAM

Type in Listing 1, BUMBLBEE.BAS,
continued on next page

check it with TYPO II and SAVE a copy before you RUN it. Choose one of the five speeds by pressing the [OPTION] key and one of the 10 levels of bee metabolism by pressing the [SELECT] key. Now press [START] and you're off.

The gravity algorithm in lines 250-340 works by simply adding G (grams) to the velocity of the Y coordinate. Horizontal movement is adjusted by adding G to the velocity of the X coordinate. The weight decreases at the metabolism rate you choose before the game starts.

I came up with Bumblebee by accident one day while I was trying to simulate Joust by using a dot in Graphics 7 to represent the rider. It looked more like a bee to me. I then

introduced "food" and "obstacles," which soon became the red and poisonous green flowers.

To create the Graphics 0 line at the top which contains the score, high score, number of bounces and weight in grams, I POKEd a 66 (64+2) into the fourth byte of the display list. To print characters on this line I first had to POKE 87,0, then PRINT, then POKE 87,7. Once I had added speed selection, sound, drawing and scrolling "Game Over," the program was finished.

Eddie Carstens is a high school senior from Rolla, Missouri. Bumblebee's acceptance by Antic caused such a local stir that a story about it appeared in his hometown newspaper.

MindWare

ATARI
\$24.95

EDUCATIONAL SOFTWARE

A unique set of educational programs that features a full range of topics with both audio and visual reinforcement.

Educational Software can be Fun

MindWare was written to keep the interest of both children and adults. With a real voice (not computerized) that talks and instructs the student and simple graphics, MindWare promises to keep the attention span of the student!

Look . . . Listen . . . Learn

MindWare features the unique look . . . listen . . . learn feature. The voice and screen work together to reinforce each other to offer one of the strongest learning devices. And, periodic quizzes allow the student to progress only after each question has been answered correctly.

Offers Advanced Subjects

MindWare contains elementary to advanced subjects, from elementary reading and math skills to classics, advanced algebra and atomic and nuclear physics.

Easy to Use

Each MindWare package contains a series of four programs on two cassettes. Each cassette will automatically load and run, so, you don't have to be a computer genius to run them. Use the order form below to order your MindWare educational packages today, only \$24.95 per package of four programs!

GENIE

401 North Washington Street
Rockville, MD 20850
(800) 638-9636

\$5 per hour—Evening/Weekend/
Holiday (300/1200 BAUD)
\$10 per hour for 2400 BAUD

Reviewed by William Colburn

GENie, the General Electric Information Service, is the newest commercial online service and also the cheapest at \$5 an hour, even for 1200 baud modems.

The overall feeling of GENie is very friendly with frequent prompts and helpful instructions. From the moment new users log on they're guided through the steps of setting up terminal defaults and presented with the main menu.

GENie provides the usual online services like electronic mail, news and commentary, articles, electronic magazines, a CB simulator and national real-time conferences. There is also a Shop and Swap, where you can buy from or sell to other GENie users on a national BBS, and the Game Room, where you can play Stellar Warrior, a multi-player game by Kesmai that sounds similar to CompuServe's MegaWars, and many other single or multi-player games.

Instead of SIGS, (special interest groups) GENIE has RoundTables where owners of various brands of computers or special hobbies can gather. At the Atari RoundTable you can select from the bulletin board, a place to post messages to all RoundTable members; a real-time conference with several "conference rooms" including the general room where there is a scheduled group conference every Wednesday night at 10 pm, Eastern time; and a public domain software library.

The Atari software library is of fair size, presently containing about 200 public domain programs. It is growing fast, however, because GENie provides free upload time. This policy

was scheduled to expire on May 31, but has been so successful that GENie may extend it. The Atari RoundTable software library has 11 categories, including one specifically for the ST. Downloading and uploading is where GENie really shines with the fastest XMODEM protocol transfers I have ever seen.

Bob Retelle, the system operator (sysop) of the Atari RoundTable, got his first sysop experience on local bulletin boards in Michigan, where he lives, and then became a co-sysop on the Delphi Atari SIG. Bob had become

John Hersey

acting chief sysop on the Delphi SIG by late last year, when he was approached about GENie's Atari RoundTable. You'll find Bob very helpful and he adds to the Atari RoundTable's warm atmosphere.

I have only a few nits to pick about GENie. In conference mode, there is no command comparable to CompuServe's [CONTROL] [V] which redisplay the line you have been typing if you get run over by somebody

else's message. It is a good idea to use a software package with an edit window while in conference mode on this service. I was able to participate without either of these tools, but they would have been helpful. GENie also defaults to half duplex, which I don't care for. You can get full duplex, however, if you type a [CONTROL] [R] after the U#= prompt before you enter your user number.

Overall, I liked GENie a lot and expect to spend a lot of time using this service.

SILENT BUTLER

Atari Corp.
1196 Borregas Avenue
Sunnyvale, CA 94086
(408) 745-2000
Requires 1050 disk drive
\$24.95, 48K disk

Reviewed by Stephen Roquemore

Silent Butler is a two-disk personal finance package that can track three checkbooks, three savings accounts, and includes a reminder file that holds birthdays, anniversaries and other dates. If you order the optional plastic checkholder, Silent Butler will even print on your own checks.

Silent Butler is easy to understand and use. It does what it claims to do. The program guides you to organizing your bills into fixed or variable expenses and automatically collects them into a current bills file for processing.

If you put the program disk into a 130XE, it automatically loads more of the program into memory in order to work faster than it does on the 800XL.

As the program loads, it displays a picture of a distinguished pipe-smoking gentleman—your "Silent Butler." The program is organized into two sections (mysteriously called "Bookmarks"), one with everyday procedures and the other with less-of-ten used activities.

The program leads you through each function in order, asking if there is anything you want to do here. When you become more experienced with the software, there is also a Jump feature that lets you skip around between functions. The program also saves automatically fairly often, so inexperienced users do not run the risk of losing much of their data.

At the end of each Bookmark, you are given a chance to review what you have done and make corrections. At the end of Bookmark 2, the Butler asks to "retire for the evening." You dismiss him by removing your disk and switching off. The cutesy formal language soon wears thin, and slows down the actual work.

The records disk is supposed to hold a year of data and can be backed up, but the program disk is copy-protected. As noted in the heading, you need an Atari 1050 disk drive, because Silent Butler is in an enhanced density format which runs only on the 1050. The program allows use of only one drive, even if you have more. Some of its functions require interchangeable disk-swapping because of this.

Silent Butler is simple to use and is functionally adequate for home needs. But I could recommend it for more users if Atari produced a single-density version that would work on other drives besides the 1050.

SUPER 3D PLOTTER II

Super 3-D Plotter II is a 3-D design, display and animation program for 8-bit Ataris. Use your joystick to draw straight-line images from point to point. Super 3-D Plotter remembers

the points of your line drawing, adjusts, redraws and page-flips the completed new image. The result is an animation display that's smooth and impressive to see.

In the Display mode, you can rotate the wire image drawing on a variety of axes and control the user distance from the shape. The user has control of a hidden line algorithm in the shape display.

Super 3-D Plotter lets you save your image to a file that contains all the points, or save the entire screen in a standard 62-sector Graphics 8 or Micro-Painter 7+ file format. The screen dump Load and Save functions are available from the Display mode, although the program does not allow naming the screen file. The default screen name is "Picture." Take care not to overwrite this file if you want to save views from more than one perspective.

There are two screen dump printing functions: one slow and high-density, and the other quick and low-density. The dump defaults to the Epson graphic standard, but the manual provides information on reprogramming the dump for other printers. Unfortunately, you'll be responsible for knowing your printer's graphic-enable byte stream and pin head fire format. This can be a tad tricky.

The Graphics Editor creates your 3-D images. It seems complex at first, but the manual explains it thoroughly and a little patience will get you started. The traditional "plot a point and connect a line" method is used. After a short time, I had simple drawings rotating on the screen.

All things considered, I like Super 3-D Plotter. The program was designed with "open architecture" so that you can port data from other programs, or save the screens to use with other graphics and printing software. Super 3-D Plotter II is useful to people like me who find fascination in seeing wire-framed images rotate, or who want printouts of a line drawing from different perspectives.

BASIC VIEW

Reviewed by Charles Jackson

BASIC View is an imaginative programming utility that will greatly aid you during debugging sessions. Written in machine language, Basic View adds several debugging commands to Atari BASIC, including a BASIC tracer.

As each line of your code is executed, the BASIC tracer highlights it in a screen window. So if there's a bug in your program, BASIC View quickly helps you locate the offending line.

You can adjust the speed of the tracer to skim over trouble-free code while zeroing in on potential trouble zones.

BASIC View can be used effectively with nearly any program you develop. It resides just below Atari BASIC (28672-40959) and just above screen memory. Therefore it should not interfere with your own machine language routines which reside elsewhere.

BASIC View divides your screen into three horizontal windows. At the top is a scrolling window displaying 11 lines of your program. As each line is executed, it is highlighted in inverse video. A glance at this window lets you know what your Atari is up to

throughout the execution of your program.

The middle window contains BASIC View's menu of commands and options. The bottom window displays the values of selected variables or memory locations used in your program.

As with any BASIC tracer/debugger, there are a few tricks you must learn for harnessing the full power of BASIC View. For example, since some BASIC View commands are issued through a joystick connected to port one, you must remember to reconfigure BASIC View when editing a program which also uses this port. BASIC View can quickly be reconfigured to accept joystick commands through any other joystick port.

Secondly, there are several key memory locations which BASIC View refuses to share with your program. Such locations include the starting address of the display list, the address of any routines to be run during the vertical blank, and the VSCROL register which controls fine vertical scrolling. For such cases, BASIC View provides alternate memory registers which *must* be used instead of the standard ones.

Without BASIC View, the VSCROL register resides at memory location 54277 (\$D405). Since BASIC View uses this register, it creates an *artificial* VSCROL register at location 29762 (\$7442). If you want to use BASIC View to debug a program that uses the VSCROL register, you *must* change your program so that it uses the artificial VSCROL register. After you are through debugging with BASIC View, you must then re-edit your program so it uses the actual registers again. Only a handful of these artificial registers must be used, and all are fully documented in the BASIC View manual.

After a telephone consultation with the Antic technical staff, BASIC View designer Jeffrey Fischman added an artificial register for the character base register (CHBAS, location 756, \$02F4)

and created version 1.2 of the program. So if you purchased BASIC View version 1.1 or 1.0, write to Softview Concepts for a free copy of version 1.2. The earlier versions will not support BASIC programs that use redefined character sets.

The artificial memory registers should pose little problem to programmers who adhere to a modular programming style. By checking one small subroutine module at a time, the number of artificial registers needed is drastically reduced. Once a subroutine is "clean," it may be added to the rest of your program with confidence.

Programmers may wish to include a DEBUG mode in their code. The following simple routine will enable the artificial VSCROL register when DEBUG=1, and use the real one when DEBUG=0.

```
10 DEBUG=0
20 VSCROL=54277
30 IF DEBUG THEN
    VSCROL=29762
.
.
.
320 POKE VSCROL,1
```

If your program uses several artificial registers, this technique can be a valuable timesaver. Just edit line 10 to 10 DEBUG=1 and your program will use the artificial registers instead of the real ones.

MONDAY MORNING MANAGER

TK Computer Products
P.O. Box 9617
Downer's Grove, IL 60515
(800) 422-4912
\$39.95, 48K disk

Reviewed by Walter Wenclewicz

Batter up! **Monday Morning Manager** brings power-hitting software to the field for baseball enthusiasts. It's a home run hit for statistics nuts like

me. With both realistic ballplaying action and accurate record-keeping, this disk won't be collecting dust with your trophies.

The opening theme takes you back to Doubleday Park in Cooperstown,

New York. The graphics and action make you feel like you're in the dugout with Connie Mack himself. Hit a home run and enjoy a full-screen, exploding scoreboard. Argue with the umpires that call every play. You'll feel like Miller Huggins managing against Eddie Sawyer and his 1950 "Whiz Kids."

Monday Morning Manager will print out statistics and line scores of each game for both hitters and pitchers. Statistics nuts can throw away the pads, pens and rulers and complete a full season on disk, no fuss or muss. This is truly a satisfying feature for those who like to review a ballgame on paper once the dust has settled.

Every game has a foul ball or two. In this case, it's the instructions. Although they are thorough, they lack the clarity that a well-placed example or two could provide. For instance, when you've selected your 15 non-pitchers, the prompt doesn't tell you how to put the pitchers in. This means going back to the main menu for instructions, and even then it can be confusing.

Monday Morning Manager is fun,

The WAIT is over!

New **ST** software from a name you can count on...

PCBoard Designer

Interactive, computer-aided design package that automates layout of printed circuit boards. **Auto-routing** with 45° or 90° traces; two-sided boards; pin-to-pin, pin-to-BUS or BUS-to-BUS. Rubberbanding of components during placement. Prints board layout, pinout, component list, net list. Output to Epson printer at 2:1. Pays for itself after first designed board. **\$395.00**

ST TextPro

Wordprocessor with professional features and easy-to-use! Full-screen editing with mouse or keyboard shortcuts. High speed input, scrolling and editing; sideways printing; multi-column output; flexible printer installation; automatic index and table of contents; up to 180 chars/line; 30 definable function keys; metafile output; much more. **\$49.95**

ST FilePro

A simple-to-use and versatile database manager. Features help screens; lightning-fast operation; tailorable display using multiple fonts; user-definable edit masks; capacity up to 64,000 records. Supports multiple files. RAM-disk support for 1040ST. Complete search, sort and file subsetting. Interfaces to TextPro. Easy printer control. **\$49.95**

ST Forth/MT

Powerful, multi-tasking Forth for the ST. A complete, 32-bit implementation based on Forth-83 standard. Development aids: full screen editor, monitor, macro assembler. 1500+ word library. TOS/LINEA commands. Floating point and complex arithmetic. Available July '86. **\$49.95**

ST PaintPro

A GEM™ among ST drawing programs. Very friendly, but very powerful. A *must* for everyone's artistic or graphics needs. Use up to **three windows**. Free-form sketching; lines, circles, ellipses, boxes, text, fill, copy, move, zoom, spray, paint, erase, undo, help. **\$49.95**

ST Text Designer

An ideal package for page layout on the ST. Accepts prepared text files from TextPro or other ASCII wordprocessors. Performs block operations—copy, move, columns. Merges bit-pattern graphics. Tools to add borders & separator lines, more. Available August '86. **\$49.95**

ST AssemPro

Professional developer's package includes editor, two-pass inter-active assembler with error locator, online help including instruction address mode and GEM parameter information, monitor-debugger, disassembler and 68020 simulator, more. Available July '86. **\$59.95**

Product Reviews

exciting and educational. Most importantly, it is realistic. Younger players will probably disregard the statistics feature, but managers of Little League teams could find it very helpful for keeping track of their players' accomplishments. I would strongly recommend Monday Morning Manager to anyone looking for some major league stats and baseball action software.

BALLYHOO

Infocom

125 Cambridge Park Drive

Cambridge, MA 02140

(617) 492-6000

\$39.95, 48K disk

Reviewed by Michael Lasky

Everybody enjoys a good mystery, right? And the circus, right? Why not combine them for what should be a surefire hit? That's the premise of **Ballyhoo**, Infocom's newest all-text adventure game.

You're under the big top of the Traveling Circus That Time Forgot, headed by visionary Tomas Munrab (Barnum spelled backwards). The show is over and you loitered behind to see what goes on. Instead, you overhear a conversation about kidnapping Munrab's daughter, Chelsea. As you type in questions on the screen, you learn slowly but surely that this circus isn't all cotton candy and happy clowns. You investigate further, although danger lurks around every unknown corner. You've never been here before, so you must find your way around by painstaking trial and error. This is the ever-changing challenge of interactive fiction.

Infocom rates Ballyhoo as a "standard level" mystery, but it repeatedly baffled me. Characters give coy, cute and evasive answers when questioned. You need to be as tenacious as Sherlock Holmes to discover who kidnapped Chelsea and how to get her back. Remember, you're at the circus, which relies on flash and illu-

sion to disguise its sordid underbelly.

Included in Ballyhoo are a ticket, a balloon and a souvenir program. Read them all carefully for important leads. With the ticket, you can have a palm reading or a hypnosis session, and questions will be answered differently depending on your sex. The balloon will get you past Harry, the guard. Ask Harry anything you want about the circus and its inhabitants—he enjoys talking.

When you stumble upon costumes and masks, try them on for size and disguise. Remember, you're an outsider, so play it cool. Act like you belong there. Greet everyone you meet. To get far beyond the sideshow, you must do seemingly outrageous things.

Like all Infocom's text adventures, Ballyhoo requires patience and endurance. This might not be the circus you want to run away with, but programmer Jeff O'Neill supplies enough escapist entertainment to make it seem as if you have.

MUSIC PAINTER

Atari Corp.

1196 Borregas Avenue

Sunnyvale, CA 94088

(408) 745-2000

\$19.95, 48K disk

Reviewed by Sol Guber

With **Music Painter**, you can play three different voices at a time. Choose from a piano, a flute, a violin and a drum. Just place colored lines

on a musical staff with your joystick. These colored lines represent musical notes as they would appear on a player piano roll, and they perform your creation while the notes scroll by.

You create music by selecting from the icons lined up along the top of the screen. A paint brush icon is the major controller. Lower a musical note onto the bar with the joystick. If you press the trigger while moving the joystick, the note will sound. Moving the joystick either right or left paints the note on the sheet music. The longer the color line, the longer the note is sounded. You can play the music forward or backward, insert or delete spaces, and copy blocks of music anywhere within the song.

My eight-year-old daughter Rebecca and her friend Lauren used Music Painter for a week. Both said it was easy to write music with the program and transcribe the songs onto disk. Rebecca liked the idea of playing one voice like a violin and another like a piano, but she said there wasn't much difference between their tones. She and Lauren both liked the sound of the drum. Lauren said it would be better to know something about music in the first place, but Music Painter could help you learn.

Rebecca and Lauren thought the colors were sometimes confusing, that the top of the screen was too black and made it difficult to see the options. They also felt that the joystick was not a precise enough tool for operating the whole program. They complained because they couldn't erase a whole song if they didn't like it. They also wished there could be a display of standard musical notes as well as the colored lines.

Overall, Music Painter is a solid piece of software and the controls are smooth. The program is generally easy to use, although it may be too complex in parts. However, it is a good tool for learning more about music and how to write your own songs.

LINKLINE

Run your 8-bit Atari from your ST

Your eyes dart back and forth. A cold sweat breaks out on your forehead. You lean over the Atari ST and run your hand over the cool plastic. The desire is very strong this time. Dazed, you stumble out of the store and clutch at the cornice, waiting for your head to clear.

You almost bought the ST that time. But you've made up your mind that as long as your trusty 8-bit Atari keeps running, you aren't going to trade up.

You don't need to stuff your 8-bit Atari in the closet when you get an ST. This month I'm going to show you the simplest way yet to cable the two computers together and transfer files back and forth. You'll even learn how to use your 8-bit Atari as the ST's *intelligent printer buffer*.

Since January, 1986 we've included an ST HELP file on the *Antic* Monthly Disk describing how to swap files between the two types of Atari computers. But the earlier method is much more cumbersome. It requires simultaneous use of two different modem programs while the user must constantly check back and forth between computers. So starting next month, the *Antic* Monthly Disk side 2 ST HELP file will explain how to transfer files by using LinkLine.

MEET LINKLINE

LinkLine, which we are introducing this month, lets you control an 8-bit Atari from your ST keyboard, using the RS-232 communications standard to transfer files back and

forth at 4800 baud. Connect a null modem cable between the ST and the 8-bit Atari, then run 8-bit BASIC LinkLine and ST LinkLine (a C program) on the respective computers.

For simplicity, the ST is the *master* computer and the 8-bit Atari is the *slave*. The slave computer waits for a command from the master computer, then decodes and acts upon that command.

Both versions of LinkLine currently recognize two commands—LOAD and SAVE. You can LOAD a file from any properly installed 8-bit Atari device, such as D: or C:, and SAVE an ST file to any 8-bit Atari device, such as D: or P:. For example, sitting at the ST, you could LOAD an 8-bit Atari file onto the 3.5-inch ST disk, or SAVE an ST file onto the 8-bit's 5.25-inch disk.

When you SAVE an ST file to the 8-bit Atari P: device, the 8-bit Atari becomes a printer buffer that accepts the ST file and patiently passes it to the printer, character-by-character, while the ST goes on about its business.

Although you can LOAD an 8-bit Atari program into your ST, it won't RUN. LinkLine is *not* an 8-bit Atari emulator.

As written, LinkLine does no error-checking on the incoming data. While I was developing this software I saw a need for some simple error-checking, such as generating a checksum for each block. So far, practical exper-

continued on next page

ence with the program has shown that none seems to be needed. Still, prudence demands at least minimal error-checks, so go ahead and add one if you like.

LinkLine's file-sending protocol is loosely based upon the original 8-bit Atari DOS file format protocol chosen by Optimized Systems Software. The LinkLine file protocol goes as follows: Byte zero is the ASCII STX (Start Text) character. Bytes one and two describe in LO, HI format the number of bytes that will follow in byte three through byte X. Byte X + 1 is currently the ASCII ETX (End Text) character. This format allows transfers up to the limit of memory available. However, to keep the program simpler, LinkLine was written to work with files only as large as 33K, or about 270 sectors of a floppy disk.

If you need to transfer files which are larger than 33K, it is possible to rewrite the LOAD and SAVE routines to check the last character in each block transmitted. If the character is indeed an ASCII ETX the file transfer is finished. If not, you could expect another LO, HI pair of bytes describing the length of the next block of data. At the end of that block would be another check for the ETX character, etc. Files of practically limitless length could be sent this way.

CABLE CONNECTION

The "line" in LinkLine is a cable called a null modem. In the past, when Computer A needed to talk to Computer B—even in the same room—someone would have connect Computer A to a modem, connect Computer B to a modem, then have Computer A call computer B on the telephone. Then some bright inventor figured out that it was possible to plug computer A directly into computer B by using the modem ports and programming each of the computers into thinking *it* was the modem for the other. Since no modem is actually hooked up, the connection is called a null modem.

In our case, the modem port on the ST is next to the printer port and uses the RS-232 standard for communication. The modem port for Atari 8-bit computers is on the Atari 850 Interface Module (see the August, 1985 *Antic* for a list of dealers who carry the 850) and is known as device R1:. This port also uses the RS-232 standard for communication.

To build the null modem cable, you will need three inexpensive items that should easily be found in any large electronics store. For the ST connection, you need a DB-25 female jack such as Radio Shack #276-1548 (\$3.99). For connecting to the Atari 850 Interface, you need a DB-9 male plug like the Radio Shack #276-1537 (\$1.99). Finally, you'll need enough multi-connector wire to reach both the 8-bit and the ST. Radio Shack #278-1320 does the job for 10 cents per foot. You can separate the computers by up to 100 feet without undue problems.

Figure 1 shows the wiring diagram and a table of pin-to-pin connections. While this project falls towards the low end of the complexity scale, if you don't know which end of a soldering iron to pick up, get help from some-

one more knowledgeable or bring these instructions to your local electronics repair center and pay them to build the cable.

THE PROGRAMS

Type LINKLINE.C into your Atari ST and save a copy to disk. LINKLINE.C is the ST master program written in Alcyon C (from the Atari ST Developer's Kit). Compile, assemble and link this C language code to **apstart**, with **aesbind**, **vdibind**, **osbind** and **libf** trailing along behind. **Relmod** the resulting file into a **.prg** file and save it to disk.

For the Atari 8-bit, you don't need to type in Listings 2 and 3. They are assembly language source code provided for your information. Instead, type in BASIC Listing 4, LINKLINE.BAS, check it with TYPO II and SAVE a copy before you RUN it. This creates an executable disk file called AUTORUN.SYS.

Antic Disk subscribers should first copy AUTORUN.SYS to another 8-bit disk. Then, following the directions on

Figure 1

the monthly disk (one last time), port LINKLINE.PRG to an ST disk.

USING LINKLINE

To start transferring files, plug in the LinkLine cable and turn on the Atari 8-bit computer. The program will start within seconds, a white screen with dark letters and a READY prompt appear, showing it's ready to receive a command. If you get a long stream of "heart" characters, turn off your 850 interface and then turn it on again.

Over at the ST, make sure you boot with a disk that has the "Set RS-232 Configuration" desk accessory. Activate it, and set the RS-232 parameters in the box exactly as listed below:

Baud Rate: 4800
Parity: None
Duplex: Half
Bits/Char: 8
Strip Bit: Off
Xon/Xoff: Off
Rts/Cts: Off

Finished? Click on OK and return to the desktop, then double-click on the LINKLINE.PRG icon and follow the prompts. First comes a welcome box, then a box asking whether you want to LOAD or SAVE a file.

If you want to LOAD an 8-bit file, type the desired filename in the file selector box that follows. When you click on OK, the requested file will be loaded from the 8-bit and saved on the ST disk using the same filename as the 8-bit file.

If you want to SAVE a file, first choose the ST file to transfer from the file selector box and click OK. Next, choose the device and filename to send to the Atari 8-bit computer from the next file selector box. When you click OK this time, the file is transferred to the 8-bit computer.

In either case, when the transfer is finished you are asked if you want to SAVE/LOAD another file. If you don't select another SAVE or LOAD, then click out through the thank-you box at the end of the program.

ST TAKE-APART

Any C program must have a **main()** section and this one describes what the program does: **initialize()**, then **communicate()**, and when **finished** finally becomes TRUE, **terminate()**; the application. Next, **communicate()** decides whether you want to LOAD or SAVE a file. Below that, **load_file()** requests a file from the Atari 8-bit, then writes the file received to the ST disk.

The function below that, **save_file()**, reads a file from the ST disk and transmits it to the Atari 8-bit disk. The function **send_file()** is called from **save_file()**, and stuffs the text in **text_buffer** out the RS-232 port character-by-character. Next, **read_the_file()** reads a file from the ST disk into **text_buffer** and **write_the_file()** writes **text_buffer** back to the ST disk.

The next function, **load_8bit_file()**, calls the function after it, **get_file()**. This pair sends the LOAD com-

mand to the 8-bit computers and receives the file from it. Next to last, **send_command()** formats and sends the LOAD or SAVE command and filename to the Atari 8-bit. Lastly, **terminate()** returns us to the desktop.

8-BIT TAKE-APART

Again, you *don't* need need to type in assembly language Listings 2 and 3, described below. You can get the same results by following the previous instructions for typing in Listing 4.

Listing 2 is LINKLINE.M65, the slave program written in 6502 assembly language as implemented by MAC/65 (from Optimized Systems Software). At the top, following the program's title and revision date, we **.include** two files from the MAC/65 system disk. These files contain the System Equates and OSS macros such as OPEN and CLOSE that operate exactly like their BASIC counterparts. Further down we **.include** the main file LINKA.M65 and then create an autorun file by pointing the program counter to the autorun vector (* = \$02E0) and stating the autorun address (.WORD STARTCODE).

Listing 3, LINKA.M65, is the main section of code called from the first file, LINKLINE.M65. First we define three Macros of our own, BUMP, DBUMP and LDW. BUMP will perform signed two-byte addition. DBUMP performs signed two-byte subtraction, and LDW will LOAD the LO, HI bytes that make up an address (from a label) into two consecutive memory locations, forming a pointer.

Lines 530 through 810 contain local definitions and equates, with the program itself starting at line 860. The entire work loop is contained between lines 1280 and 1470. There we OPEN channel TV to the E: editor device which also clears the screen, changes the background and border colors to white (color 0, luminance 8), and sets the letter luminance to dark (color 0, luminance 2). Quickly we BPUT the title message to the TV channel we opened to the screen at line 1350.

Line 1370 is an XIO command which sets the level of character translation the R1: handler performs. This translation is explained fully in your 850 Interface manual. Here we set the translation level OFF by using a value of 32. Line 1380 is an XIO command which sets the BAUD rate for communication. Here, the value BAUD (13) is used to set the communication rate at 4800 baud. Falling into the MAIN routine, we BPUT the READY prompt to the TV screen, then go wait for a command. When one is received, we fall down to line 1440, where we BPUT the "working" message to the screen and go off to decode the command.

When the command has finished, we jump back up to the start of the MAIN loop to wait for another command.

OPENFILE is a subroutine which will OPEN a 5.25-inch disk file (to read from) named in the buffer FILENAME. Below that, WRITEFILE is a subroutine which will create and write the file in TEXTBUFFER to the 5.25-inch disk.

EZRAM™ 512K Memory Upgrade for the Atari520ST®

520

Featuring the EZTemp™ Soldering Guide

Upgrade Your 520ST™ to a Full Megabyte of RAM

- Increase spreadsheet and database capability.
- Dramatically improve RAM disk capacity for enhanced I/O operations

Designed for Simple Installation

- Features the EZTemp™ solder template. All the soldering occurs on the template not on the RAM chips. Eliminates chip stacking.
- Clear, easy to follow, illustrated installation instructions.

Free Software 6 Month Warranty

- Memory check diagnostic software and additional accessory programs included.

Made in the U.S.A. S. L. : \$199.00

Brookline, MA 02146
(617) 232-2317

Megamax C

for the
Atari ST

Featuring

- One pass Compile • In-Line Assembly • Smart Linker
- Full Access to GEM routines • Register Variable Support • Position Independent Code • and much more...

System Includes:

- Full K&R C Compiler (with common extensions)
- Linker • Librarian • Disassembler • C Specific Editor
- Code Improver • Documentation • Graphical Shell

Benchmark	Compile Time	Execute Time	Size
Sieve	70	2.28	5095
"Hello, world"	63	N/A	4691

VISA, MC, COD ACCEPTED

SENDANSWER is the subroutine which will transmit TEXTBUFFER out to the RS-232 port. GETCOMMAND is where the Atari 8-bit sits waiting for the ST to send it a command. It accepts characters from the RS-232 port until a CR is received. Control then passes below to DECODE, where the command line is scanned for an S or an L, meaning SAVE or LOAD. If one is found, the following letters constitute the filename, and control is passed to either SAVE or LOAD.

ADD-ONS

How far can you take LinkLine? Being as expandable as it is, probably very far. I expect to see many utilities designed to be used with LinkLine. The person needed to accomplish this is *you*. And then write to **Antic** and tell us how you did it.

As just one example of the possibilities, it would be nice to be able to display the 8-bit Atari disk directory on the ST screen. (How about clicking on an Atari 8-bit Icon?) Go to it!

Listing on page 91

WORD FOR WORD™

NEW

A crossword game for the ATARI ST!

It's a challenging new game in which the players take turns creating words on a playing board. Here's what reviewers have to say:

"...the whole game design is extremely user-friendly... a winner." ANALOG COMPUTING, June 1986

"...It's easy to use the mouse to design and save your own board layout... makes the game even more fun." ANTIC, April 1986

"...I am very impressed with Word for Word... full utilization of GEM... solid performance... a joy to play... attention to detail... excellent product."

ST APPLICATIONS, Jan.-Feb. 1986

To Order

Contact your Atari ST dealer, or send \$39.95 plus \$3.50 for shipping and handling. (\$43.45) California residents add \$2.40 sales tax. (\$45.85)

MasterCard or Visa accepted

Works with color (medium resolution) or monochrome monitor.

ATARI DISK DRIVE OWNERS . . . HAPPY BLASTS RETAIL PRICE—ORDER TOLL FREE!

THE FAMOUS HAPPY ENHANCEMENT NOW ONLY \$149.95
for 1050 order number HC1A, for 810 order number HC8A

Makes your disk drive read and write faster, and allows you to execute the HAPPY WARP SPEED SOFTWARE. Available only for ATARI 1050 and 810 disk drives. 1050 version allows true double density plus the original single and enhanced density. PRICE INCLUDES WARP SPEED SOFTWARE BELOW, installation required.

HAPPY WARP SPEED SOFTWARE REV 7 (not sold separately)

Includes the famous HAPPY BACKUP and COMPACTOR which are the most powerful disk backup utilities available for your ATARI computer, plus MULTI DRIVE which allows high speed simultaneous reading and writing with up to 4 HAPPY ENHANCED drives, plus SECTOR COPIER which is the fastest disk copier that supports the 130XE RAMDISK, plus the WARP SPEED DOS which improves ATARI DOS 2.0s to allow fastest speed, plus HAPPY'S DIAGNOSTIC which allows comprehensive disk drive testing.

HAPPY 1050 CONTROLLER \$64.95 order number HC2A

For use with HAPPY ENHANCED 1050 disk drives only. Allows easy access to HAPPY 1050 slow and fast speeds and ultimate control of disk drive write protect, including writing to disk back side and protecting valuable data disks. Printed circuit board has switches and write protect indicator LED, installation required.

GET YOUR FAVORITE HIGH SPEED DOUBLE DENSITY DOS

Both of these disk operating systems support the fastest speed with both HAPPY 810* and 1050, and with HAPPY 1050 you get true double density. WARP SPEED DOS XL is HAPPY's own version of OSS DOS XL, and includes under cartridge, under ROM and AXLON RAM disk version, and is order number HC4A at \$29.95. TOP DOS version 1.5 from ECLIPSE SOFTWARE has more menu driven features, operates in all three densities, supports the 130XE RAMDISK, and is order number HC6A at \$39.95. *Note: 810 requires upgrade below.

810 VERSION 7 UPGRADE \$49.95 order number HU3A -XXXX

Allows older 810 HAPPIES to use newer software. Includes custom plug in IC and rev 7 WARP SPEED SOFTWARE. Same price for all HAPPY 810s registered or not. When ordering replace XXXX in part number with the serial number of your HAPPY COMPUTERS manufactured 810 board, or with a 2732 or 2532 which corresponds to the EPROM part number in your HAPPY 810 socket A102 of your side board modified HAPPY (not made by HAPPY COMPUTERS), installation required. Upgrade not needed for new 810 HAPPYS and serial number over 8000.

SUPER PACKAGE SPECIALS

Get a HAPPY 1050 ENHANCEMENT and CONTROLLER and WARP SPEED DOS XL for just \$199.95 order number HS5A, or get the same with TOP DOS 1.5 instead of DOS XL for just \$214.95 order number HS7A. If you already have the 1050 ENHANCEMENT you can get the HAPPY 1050 CONTROLLER and WARP SPEED DOS XL for \$74.95 order number HXL9A, or get the HAPPY 1050 CONTROLLER and TOP DOS 1.5 for just \$84.95 order number HTD9A. For other specials and dealer pricing call (408) 779-3830.

All prices include UPS shipping in USA, add \$10.00 for shipment outside USA. California residents add sales tax. No extra charge for credit cards or COD, VISA or MASTERCARD accepted. Our toll free number is an order taking service, not our line. To ORDER ONLY call (800) 538-8157 outside California, or (800) 672-3470 inside California, ask for extension 817 and have your credit card, part number and quantities ready. Toll free hours 6 am to 12 pm Mon.-Fri., 8 am to 8 pm Sat. & Sun., Pacific Time. For answers to questions call HAPPY COMPUTERS at our number below. Office hours 9-5 Mon.-Fri. Pacific Time.

ProCopy

INTRODUCTORY OFFER

\$24.95 ST BACKUP UTILITY

Regular \$34.95

Offer ends July 31, 1986

Software can easily be damaged by heat, humidity, magnetic fields, wear & tear or just dirt. The exposed surface of a disk can be affected by even a touch. The best way to preserve your software is to make backups. ProCopy provides the solution.

- Duplicates virtually any protected disk.
- Reasonable update policy available.
- Protects against accidental loss of expensive software.
- Not copy-protected for your convenience.
- ProCopy works on all Atari ST computers.

ORDER TODAY AT THIS REDUCED RATE

Send \$24.95 (check or money order). VISA & MC accepted. Add \$2.00 shipping & handling in U.S. & Canada. Overseas shipping & handling add \$4.50.

MODULA-2

the successor to Pascal

FOR
ATARI
520ST

- FULL interface to GEM DOS, AES and VDI.
- 32-bit native code implementation with all standard modules.
- Full screen editor linked to compiler for rapid error detection
- Smart Linker/Automated desktop.
- Installs on hard disk and RAMdisk.
- Supports transcendental functions and real numbers.
- CODE statement for assembly code.
- Modula-2 is NOT copy protected.

RAMdisk Benchmarks	Compile	Link	Execute
Sieve of Eratosthenes	10	21	5.3
Null Program	7.1	5.5	—

Added features of Modula-2 not found in Pascal

- CASE has an ELSE and may contain subranges
- Dynamic strings of any size
- Machine level interface
 - Bit-wise operators
 - Direct port and Memory access
 - Absolute addressing
 - Interrupt structure
- Programs may be broken up into Modules for separate compilation
- Multi-tasking is supported
- Module version control
- Open array parameters (VAR r: ARRAY OF REALS;)
- Type transfer functions
- Definable scope of objects

Pascal and Modula-2 source code are nearly identical. Modula-2 should be thought of as an enhancement to Pascal (they were both designed by Professor Niklaus Wirth).

Regular Version: \$79.95 Developer's Version: \$149.95

The developer's version supplies an extra diskette containing a symbol file decoder, link and load file disassemblers, a source file cross referencer, symbolic debugger, high level Windows Module, and the Resource Compiler.

ONLINE PICTURE VIEWER

GrafCon-ST: Part II

Last month, *Antic* published *GrafCon-ST*, a program that converts ST pictures between resolutions (low, medium and high) and also converts ST pictures into the RLE (Run Length Encoded) format used by CompuServe for their online high-resolution graphics. The complete program was too long to print in one issue. The RLE File Viewer program and the medium resolution converter functions in this issue complete the *GrafCon-ST* program.

MED-RES FUNCTIONS

The four medium-resolution functions left out of *GrafCon-ST* last month are **LOMED()**, **MEDLO()**, **MEDHI()** and **HIMED()**. As the titles indicate, the purposes of these respective functions are to convert **LOW** to **MEDium** resolution, **MEDium** to **LOW** resolution, **MEDium** to **HIGH** resolution and **HIGH** to **MEDium** resolution.

For example, if you need to use the **LOMED()** (**LOW** to **MEDium**) function, insert the **LOMED()** section of code into the *GrafCon ST* listing where **LOMED()** was indicated as being left out last month. Then recompile the program.

Last month's original listing shows

clearly where each additional function should be added. But remember, as explained in the July, 1986 *GrafCon-ST* article, you don't need to type in any of the resolution conversion functions that you aren't going to use.

RLE FILE VIEWER

GrafCon-ST allows you to convert your ST graphics pictures into RLE format for uploading to CompuServe. But what about using the RLE *VIDTEX* pictures already online? This month's program will take the ASCII picture file downloaded from CompuServe (as explained in last month's *VIDTEX Converter* article) and convert it to any ST graphics file format.

To keep things simpler, this month's RLE File Viewer program is presented as a stand-alone application. You don't need to merge it into *GrafCon-ST*.

USING RLESEE

Make sure that your disk has a RLE ASCII file—which you have downloaded from CompuServe or created with *GrafCon-ST*, as explained in last month's articles. Then double-click

on **RLESEE.PRG**. After the welcome box, you are asked to select a destination format for the picture. Click on either **NEO**, **DEGAS**, or **DOODLE**. Next, choose the RLE filename from the file selector box and click on **OK**. Either you will see the picture begin to appear, or you will see a box stating the ST doesn't think the file is a good RLE picture. While the picture is being drawn, you may press either mouse button to abort.

When finished, you will get a file selector box prompting you to choose or create a file to write the picture to. Then you are presented with an alert box asking if you want to draw another RLE image.

TYPING IN RLESEE

Listing 1, **RLESEE.C**, is the RLE file viewer program written in Alcyon C from Atari ST Developer's Kit. Type it in carefully and save it to disk. Compile, assemble and link this program to **apstart**, with **vdibind**, **aesbind**, **osbind**, and **libf** following along behind. Next, **Relmod** the resulting **.68K** file into an executable **.prg** program and you're finished.

Those of you with MegaMax C can type it in, but you need to **Malloc()**

the RAM needed for the screen and text buffer. Hippo-C owners are also encouraged to try, but you'll need the Hippo XBIOS file available for downloading from the SIG*Atari ST Section on CompuServe.

PROGRAM TAKE-APART

At the top of the program we have a commented block for the program title and revision date. Below that are the **#defines**, which are included here to make the program a bit easier to read. Variable declarations are next, with string **char** definitions coming after.

Our **main()** routine gives a list of what to do. First, **initialize()** the application, then **convert()** a picture and **repeat** the process **while(not finished)**. Eventually the application gets **finished** and will **terminate()**.

The **convert()** function describes the steps needed to properly convert an RLE file to a graphics file. First,

read_the_picture() into an internal buffer. The next line will let us **select_parameters()**, which here determines what type of display format the resulting picture gets written in. Next, **make_picture()** converts the RLE ASCII format into one of the three individual graphics formats.

The picture will be expanded to fill as much of the screen as possible, regardless of resolution. Eventually the conversion will be complete, and control will drop down to **write_the_file()**. Before this section ends, you are asked if you want to perform another conversion. Click on YES or NO.

The **make_picture()** routine first scans the file looking for the **ESCAPE G H** header RLE files need. If it

doesn't find one, it assumes the file is not an RLE file and tells you so before it drops out. Otherwise, the RLE file has been **found** and control passes to **draw_picture()**.

The **draw_picture()** function will scan through the ASCII RLE file, pulling out the pairs of black and white pixel amounts. Since we will be drawing, we set **drawing** to **TRUE**, page flip to the destination picture buffer, set **row** and **column** to zero and hide the mouse cursor.

To reconstruct the picture, **while** we are **drawing**, we get each pair of black and white values and put the values in **blackdots** and **whitedots**. In **blackdots**, reaching the end of the file is signified with the **ESCAPE** character. Then **drawing** is set to **FALSE**, showing we are **finished**. Otherwise the next two blocks of code operate identically, first on the black dots and then on the white. Let's examine just the **blackdots** routine.

To plot the black dots, which we do **while** we have **blackdots** and we are **drawing**, call **plot()**—passing in the **row**, **column**, and **color** of the dot desired. When the dot has been plotted, we decrement the count of **blackdots** and increment the **column** count to point at the next column to the right. Then we perform the **end_of_line_check()** which checks for the end of each **column** in turn and then points to the next **row**.

After plotting each black and white dot in this pair, and before we check for the next available pair, we check to see if either mouse button is pressed in the **graf_mkstate()** call. If either button has been pressed, the value in **pressed** will be greater than zero, so **pressed** can be considered **TRUE** and **drawing** will be set **FALSE**.

Finally, **read_the_picture()** will read in the RLE ASCII file from disk and place it into a buffer. The function **write_the_file()** writes the converted graphics picture back to disk in the proper graphics format, and **terminate()** will properly close the application and exit back to the Desktop.

dBMAN

Important dBase III workalike

In the world of business computing dominated by the IBM PC, dBase III is the king of database software. This high-powered, versatile, relational database—like its successful predecessor dBase II—is complex and not easy to learn.

dBMAN, short for dataBase MANager, is a dBaseIII-compatible database that was originally developed by VersaSoft for the IBM PC. Now available for the Atari ST, dBMAN is a true relational database that can access records in up to 10 different data files at once. This makes it easy to transfer information between files, such as posting a transaction file from a batch entry file.

Like dBase III, dBMAN is actually a programming language controlled by a large repertoire of commands that you will need to learn. It does not use the ST's GEM interface or the mouse. Experienced dBase III users will feel right at home, but novices may well be advised to purchase at least one independently published dBase III tutorial book. The dBMAN manual does not contain a significant tutorial for beginners.

(As this issue went to press, Antic learned that Atari Corp. has obtained the exclusive worldwide marketing rights to dBMAN. This move could potentially give dBMAN tremendous penetration of the Atari market—somewhat on the level that AtariWriter had in the 8-bit word processor field. According to Atari, developers will

be able to use dBMAN to create commercial "runtime" applications that operate without the database. A GEM version of dBMAN will appear later, with inexpensive upgrades available to owners of the earlier version.—ANTIC ED)

The upper part of the dBMAN screen is used to type in commands and display status information, including error messages, the current file and record, and a HELP line with prompts for active keys. From the command line, you perform the basic actions of creating and updating a database. Data files can be indexed on one or many fields, as can calculations using fields. When data won't fit in the lower display area, the arrow keys are used to scroll pages horizontally or vertically.

Among the best features of dBMAN and other dBaseII/III programs is the creation of command files which can automatically execute a series of dBMAN commands and allow programmers to control all user interactions. Command files allow turnkey applications to be created for novices.

dBMAN's ability to "filter" a database is mostly used with command files. Filtering allows the user to see only relevant data records. Outdated or inappropriate records are filtered and never shown.

continued on next page

The command names in dBMAN and dBaseIII are almost alike. But unlike dBase III, there is no command file text editor in dBMAN, so you must use a separate text editing program to create a command file, and then enter dBMAN to debug it.

If you are accustomed to using abbreviations in dBase, it is annoying that you cannot abbreviate dBMAN command keywords. dBase only requires the first four letters of a command keyword. It may turn out to be more difficult to transport dBase applications because the commands must be spelled out.

Sending information to a printer seems unnecessarily difficult. There are two choices. First, the command Set Print On sends to the printer any values displayed with the ? or ?? commands. This approach is not useful for printing lists, mailing labels or reports. The second approach is to define a report format using the Create Report command. This is complex and poorly documented. There are no examples of creating a report in the manual or on disk.

dBMAN is not copy-protected, making it easy to keep and maintain backups of the program, an important consideration to advanced users taking full advantage of the product. The program should also benefit from its ability to easily transport runtime applications to the ST from the IBM PC. And the wealth of excellent third-party books

and classes teaching dBase III should prove helpful to beginning dBMAN users.

Mach1™ for the Atari ST

Mach1: multi-tasking Forth-83/GEM development system

With everything you need to develop stand-alone applications, including: integrated GEM editor, full GEM and DOS support, Motorola assembler, examples, and our 300 page manual.

Mach1 is interactive, so it allows you to experiment with the ST without going thru the compile-link-execute cycle. But when you do load in programs, look how we stack up:

Sieve	Compile	Link	Execute
Mach1	00.7	00.0	4.41
Megamax C	70	24	3.83
Hippo C	58.4	1:37	8.4

C's w/o register variables

(That's three times the execution speed of other Forth's) Note the turnaround time. It simply takes less time to develop your programs or finished products with Mach1.

N-VISION

Splashy new paint software

Reviewed by VIC ALBINO

This toucan's bright plumage and crisp detail demonstrate the graphics power of N-Vision.

Undoubtedly the name of this program is meant to be pronounced "en-vision," which the dictionary defines as "a picture in the mind." N-Vision, the first serious competitor to Batteries Included's DEGAS in the "painting" software category, unlocks the spectacular graphics ability of the Atari ST.

N-Vision was created by Audio Light, the same company that developed ActiVision's new Music Studio

program, so files from both programs are compatible. With a program included on the disk, you can mix N-Vision graphics with Music Studio sounds to create computerized slide shows. (We will review both the ST and 8-bit Atari

versions of Music Studio in future issues.—ANTIC ED)

N-Vision works in all three ST graphic modes and has over 70 different features you can access with a click of the mouse from drop-down menus—including paint, draw, spray paint, cut and paste, circles, boxes, loadable text fonts (five different sizes with special effects) and printer dumps for Epson-compatibles.

But that's just the beginning. N-Vision adds many new features to the usual list of functions you'd expect in a good graphics program, including double-screen graphics that dump to a printer as full-page pictures, pull-down screens, and a feature that

really sets it apart from the pack, a "clipboard." On this third screen, you can try out new ideas without disturbing work in progress. You can also create and save your own additions to the pre-drawn "clip art" graphics supplied with the program. Audio

**The first serious
competition for
Batteries Included's
DEGAS**

Light plans to release additional clip art disks at \$20 each.

One feature that really sets N-Vision apart from DEGAS is "color cycling." This is the same technique that makes your RGB ST screen seem to vibrate with colors and flashing Atari fuji symbols when you first boot up TOS. With color cycling, you can "animate"

continued on next page

objects with a spectrum of colors that flip beneath the shape, making it appear to move. It's not true animation, but an illusion that makes light seem to flash, or a clown seem to juggle balls. Audio Light uses this beautifully to make a comet flash by in an optional Halley's Comet slide show disk, available for \$15.

A palette of sixteen colors is stored in a "slot." Each slot's colors are active for an amount of time you specify. The colors are saved along with the artwork and automatically reactivated each time the picture is displayed. Another mode called "repeat" can help you create rudimentary animation by allowing you to define a line or shape and quickly duplicate it with the click of a mouse button.

**With
color cycling, you
can animate objects
with a spectrum of
colors, making them
appear to move.**

Most paint programs have a magnification mode allowing the artist to do detailed work pixel-by-pixel. N-Vision has three "zoom" levels at 2x, 4x and 8x screen size. Even better, a split screen shows half of the graphic in normal size while the magnification mode is being used so the full effect of the changes can be seen immediately.

Pull down a screen, and you'll find what looks like a patchwork quilt checkerboarded with dozens of ready-made color patterns in almost every conceivable design. If you still cannot find exactly what you want, an easy-to-use pattern edit function helps you make your own fill patterns using all 16 colors in the ST low-

resolution mode.

By blending pixels, you can generate color shadings, enabling you to produce work that appears to have even more than the sixteen colors available in the low resolution mode.

Extra features even enhance the routine task of saving and loading pictures. You can rename and delete files, format disks (single or double-sided) and see how much disk space remains. Pictures can be saved in the widely used NEOchrome 32K format, or in a space-saving compressed format that allows you to squeeze more picture files on a disk.

A sample slideshow of music and graphics is included on the disk, along with the program that enables you to create your own. To use this program, you must first create a short text file with a text editor or word processor defining which pictures to show, how long to display them, and whether or not music will play during the presentation. Several songs created with Music Studio are included on the N-Vision disk to use as soundtrack accompaniments.

But even a package as excellent as N-Vision could be improved. So many features are in this program that an alphabetized index listing them all would be most welcome. The color animation feature is powerful but complex; new users would appreciate more examples of how to use it. A bug appears when the alternate text character set is used in its smallest size and some letters are incorrectly formed. It's a minor flaw, however, as this text size is so small it won't be used often anyway.

N-Vision meets the highest standards of excellence for ST graphics software. With N-Vision in your computer, the pictures in your mind can be turned into reality more easily than ever before.

Help Calc For The Atari ST

ONLY 24.95

FEATURES for VIP PROFESSIONAL users only:

- 2-key macro ability for com mon function: such as saving and printing
- Several templates use special macros to ease the use of graphing and copying functions

Works with EZ CALC or VIP Professional
VIP Professional is a Trademark of VIP TECHNOLOGIES.

TEMPLATES INCLUDED:

- CHECKING ACCOUNT REGISTER
- DEPRECIATION SCHEDULE
- LOAN AMORTIZATION SCHEDULE
- RENTING vs BUYING A HOUSE
- PERSONAL FINANCE STATEMENT
- SAVINGS RATE COMPARISON
- IRA WITHDRAWAL SCHEDULE
- NAME AND ADDRESS DIRECTORY
- HOME INVENTORY
- INVESTMENT PORTFOLIO
- INVESTMENT COMPARISONS

HELPMATE

ONLY 39.95

For The Atari ST

- Four function 10 key calculator for use with mouse or ten key
- Telephone/Name Index
- Appointment Calendar
- Set alarm functions for any day in the year

In the future you'll be able to use your computer to organize your desk without having the clutter of the Calculator, Telephone / Name Index, Appointment Calendar, Alarm Clock, all over your desk. The future is here! With **Helpmate ST** you can use your mouse to organize your desk top, leaving extra room for more important tasks. All those desk accessories are hidden away until you need them. Use the pull down menus with many ST programs or by themselves.

E-Z CALC™ For The Atari ST

ONLY 69.95

- 300 columns by 999 rows
- Extensive use of GEM windows
- Note Pad
- Split-screen capabilities
- All commands are under mouse control
- On-line Help windows
- Built in 10 Key Calculator
- Exclusively for Atari ST
- 10 macros controlled by the function keys or the mouse

E-Z CALC is a fully implemented GEM based spreadsheet for home and business use. This is by far the most powerful spreadsheet available for the price. Better yet, all commands are **mouse** controlled for speed and ease of use. **E-Z CALC** also used less memory than other spreadsheets for the ST, leaving more room for your formulas and data. If you've never used a spreadsheet before, you'll be amazed how **easy** **E-Z CALC** is to learn and use, while experienced users will love the speed of a mouse controlled spreadsheet.

INVENTORY MASTER

THIS IS THE FASTEST, MOST COMPREHENSIVE INVENTORY PROGRAM AVAILABLE FOR THE ATARI.

INVENTORY MASTER AND A 48K ATARI COMPUTER GIVES SMALL BUSINESS THE ABILITY TO BECOME A MASTER OF INVENTORY CONTROL AT A VERY LOW PRICE. INVENTORY MASTER has all the features of programs costing many times more. Here are just a few

- Use 1-4 disk drives
- Over 1700 records per disk
- Retrieve any item within 2 seconds
- Fast edit capability plus many more features

For 400/800, XL, and XE

One of the most versatile data-base programs available.

800, XL, XE 39.95

Features Includes:

- Lighting fast retrieval
- Fast Sorts on any field
- Supports up to 4 drives
- Single or double density
- Store about 1100 records per disk side in double density
- On-screen prompts
- Help-screens
- State abbreviation table
- Redefinable fields
- Print labels 1, 2, or 3-up
- View records on screen
- Much more!
- Search on any field (fast search on name field = 1 second to find a name out of 1000)
- Built-in printer driver
- Automatic or manual deletion of duplicate records
- Merge files
- Create subtitles

INVOICE MASTER

For 400/800, XL, and XE W/48K Ram.

ONLY \$89.95

- Create your own invoice format
- Configures for any printer

- Adds more power to Inventory Master or use by itself
- Can use 1 to 4 disk drives (800, XL, XE)

INVOICE MASTER is an extremely versatile program that allows the small business owner to enter and print orders on a custom **INVOICE**. **INVOICE MASTER** can be used by itself or with **INVENTORY MASTER** to run a complete inventory system.

INVOICE MASTER will store over 200 records with up to 20 data fields per disk. The records can be stored, sorted, retrieved, and printed, saving hours of time and effort.

PRO FORTRAN-77

Prospero Software
190 Castlenau
London SW13 9DH
England
\$149

Reviewed by Mike Fleischman

Prospero **Pro Fortran-77** is a full implementation of the ANSI standard version of Fortran-77. The program comes with a manual and a disk containing the two-pass Fortran compiler and the linker. It does not come with an editor, however, so you will need a text editor or word processor to use this package.

I found I could use the software on either the ST's double-sided disk drive or two single-sided drives. The compiler supports all GEM AES and VDI calls as well as the TOS environment commands. Writing a program with full GEM support should be relatively easy.

This is a *very* complete Fortran package. The language supports 1-, 2- and 4-byte integers and logicals, 4- and 8-byte floating point numbers and

complex numbers. As in standard Fortran the lines are 72 columns long and character names can be only six characters. Implicit type checking is also implemented as well as the standard default Fortran work file. The most files you can have open at one time is 15. GEM support deviates from the Fortran standard, because the company followed all the C definitions for the VDI and AES interfaces.

The first thing you will discover about the Pro Fortran compiler is that the language requires a memory resident section to be installed before anything else will run. This brings up an interesting question: Does Prospero want royalties for use of their memory resident section? I found that their copyright agreement states that you are buying this package *for your sole use only* and that you will not disassemble or alter the software for your own use.

From this I would conclude that if you intend to use this software for anything other than your own use, you'd be wise to contact Prospero Software for any agreements necessary.

The compiler and linker prompt you for the necessary information. The compiler also has optional prompts for all compile parameters. There is also a configuration program to customize the default settings. The compile time is relatively fast and the resulting code is compact. The only real hitch to writing your own program is the lack of an editor.

I used a Sieve test to measure the speed of the compiler on my 520ST (with one megabyte of memory and two disk drives). I found that the program compiled and linked in two minutes and 46 seconds, producing a program 4,758 bytes long. My running time for this program was 11 minutes and eight seconds, compared to 13 minutes, 21 seconds for ST Basic, and 2.53 *seconds* for Digital Research C.

Fortran-77 follows all the standard Fortran syntax and you should have no trouble moving your source code to a mainframe computer once it is running. I was impressed with the quality of the package and the ease of its use, but the copyright agreement

continued on next page

would make me want a second look. Also, I am concerned that the program runs so slowly.

But this is generally a very good implementation of Fortran-77. If you are a programming student or need to learn or use Fortran-77 in your college studies, this would be a worthwhile investment.

HIPPO BACKGAMMON

Hippopotamus Software
985 University Ave
Los Gatos, CA 95030
(408) 395-3190
\$39.95

Reviewed by Harvey Bernstein

One of the great disappointments for 8-bit Atari users is the lack of a good backgammon program. Fortunately, ST owners now have their needs met with **HippoBackgammon**. This new game from Hippopotamus Software simulates a backgammon board in living color and offers a choice of two computer "robot" opponents to play against.

Both robots play a good game, but the more challenging opponent seemed to be Robot B. Each can be set to play at either beginner, intermediate, or advanced mode, but the more experienced player will want to stay with the advanced.

By far, the most unique feature of HippoBackgammon is its ability to modify, or "reprogram," the robot opponents. The decision tree used by each robot is in two parts, the cortex and the neurons. From within the cortex, you can control the likelihood that a robot will offer or accept the doubling cube, how frequently blots will be left and where, how many pieces to keep on a particular point and strategy for bearing off. The neurons can be adjusted to determine the relative importance of any point.

Excellent use is made of the ST interface and play is completely intuitive. You use the mouse to roll your dice and move your pips. The drop-down windows allow you to choose which robot you wish to play against,

change board colors, save a game or switch sides. You can even play from a pre-set position—an option usually found only in chess programs.

My only quibble with HippoBackgammon is a small design flaw. The game lets you pass the dice back to the robot without moving your pieces, allowing you to ignore a normally bad roll. However, since most ST owners and all **ST Resource** readers are completely honest, they should have no difficulty in overcoming this temptation. At any rate, this is a good, solid translation of the popular board game and should be welcomed by any backgammon player who owns an ST.

WINNIE THE POOH

Sierra On-Line
Coarsegold, CA 93614
(209) 683-6858
\$24.95, age 7 and up

Reviewed by Rebecca Guber, Age 8
(Typing by Sol Guber)

Winnie the Pooh in the Hundred Acre Woods is a very good program. It is one of the best kids' adventure games that I have ever played. It has excellent graphics, but I wish that it had more screens.

The object of Winnie the Pooh is to return things to their owners before the blustery wind comes and blows them away. There are 10 things that you need to find and return. You have to go to the screen where the thing is. The objects are hoes, or scarves, or carrots. You must figure out not only whom they belong to, but also how to get from where you are to where the person is.

Before I forget, let me tell you some more about the screens. You start out in a room and there are some directions on the bottom of the screen. On the top of the screen there is usually a really nice picture about the words on the bottom. You have to know how to read to play this game, because it is a lot like the Winnie the Pooh books. But the reading isn't too hard. Maybe a second grader might have a

few problems, but not too many. You can leave the room by moving North, East, or West. If you pick South, the computer tells you that you can't go in that direction. You are then in some woods and there is a little story under the new picture. Sometimes there is also a thing in the picture. You can pick it up or not. You can carry only one thing at a time.

Before I forget again, let me tell you more about choosing what you want to do. This program was written for the Atari 520 ST and it works with a mouse. When you come to a screen, there are sometimes choices about what you can do there. Each choice has a number before it. To do the choice, you can press the number and then press [RETURN]. To go North, all you have to do is press [N]. I will let you guess what letter you need to go South. There is an arrow that you move with the mouse. You can move the arrow to a choice and press the button and it is the same as if you typed it.

So what you do is Pick up something, go to the person that it belongs to and Drop the thing there. There are 10 things to pick up in any game and my dad (who knows how to cheat a lot) says that there are 40 different things in all the games. You have to figure out what goes to all of Winnie's friends like Christopher Robin, Owl, Kanga and Roo, Eeyore and Rabbit. My Dad says that I forgot Tigger, but I did that on purpose. I don't think that Tigger should be in this game because he makes me cuss whenever he comes onto a screen. What he does is pick you up and bounce you around and you drop everything.

One other thing is that there is a toy box where you can go and save the game so that you can come back later and continue. There are also music and sing alongs in this game, with the words at the bottom of the screen.

The box says that the program will teach reading skills, map skills and logical thinking. It does teach reading because you have to read the bottom of the screen exactly. There is a map included and you need it to learn to get around the Hundred Acre Woods.

I am not sure if it teaches logical thinking or not, since it is usually obvious who the things belong to. Otherwise I could always ask Owl for a hint.

I really liked this game and will play it some more since it changes after you return everything and then there is a party for you.

ST GEM PROGRAMMER'S REFERENCE

Abacus Software
P.O. Box 7211
Grand Rapids, MI 49510
(616) 241-5510
414 pages, 1986
\$19.95

Review by Russell Magnuson

For many of us who purchased 520STs early, the lack of documentation was a big disappointment. Fortunately this situation is beginning to ease with the introduction of Abacus Software's impressive line of ST guidebooks. The latest Abacus title is **Atari ST GEM Programmer's Reference** by Norbert Szczepanowski and Bernard Gunther.

The GEM Programmer's Reference is advertised as "the complete guide to programming the ST using the Graphics Environment Manager." It contains a great deal of very useful information, but is probably not the only book you will ever need for programming your ST computer using the GEM interface.

The text is divided into four main sections—ST GEM Organization, Programming with GEM, VDI and AES. Also included are appendices with an

overview of the VDI and AES functions, and a listing of the 68000 instruction set along with a complete index.

GEM program examples in C and assembly language along with function call descriptions are provided. However, programmers seriously interested in exploring the GEM environment should be prepared to dig in, make notes, and spend lots of time compiling and recompiling the example programs.

A section on the Atari ST Developer's Package lists the various programs and utilities provided in this professional kit and gives short explanations of how to use them. The authors describe which files have to be on your work disk when compiling or assembling a program. Also included are instructions for using the MINCE editor, creating batch files, and compiling and linking C source files.

A section on the 68000 assembler lists the assembler options and source code directives that can be used when assembling a 68000 assembly language source file. A few programming examples in both C and assembly language help the user get a feel for compiling and assembling their own programs.

The value of the ST GEM Programmer's Reference really becomes apparent in the chapter on the VDI (Virtual Device Interface). VDI is the method GEM provides for interfacing to graphic routines such as drawing lines, circles, or rectangles. Parameters for each GEM VDI function call are described fully enough to provide the programmer with sufficient information to make a function work properly.

This is important because GEM is *very* particular about the input/output parameters you send it. You must know how to initialize them properly before trying to use a VDI/AES call in your program.

All of the available graphic functions on the ST are covered, along with their respective C function names. Complete and excellent program examples demonstrate how to draw a filled ellipse, rectangle and circle, and create graphic text output.

The chapter on AES (Applications Environment Services) describes the routines that GEM uses to provide services like drop-down menus, dialog boxes, or windows. There are sections on multi-tasking, window techniques and the graphics library. Each GEM AES function call is briefly described and its required parameters are listed. Program examples demonstrate how to open a window, display a warning box and create a menu bar.

Missing from the ST GEM Programmer's Reference is a comprehensive "nuts and bolts" discussion on how data is passed back and forth between GEM function calls and what form GEM expects this data to be in. This information is essential if a compiler other than Digital Research's CP/M 68K C compiler (part of the Atari Developer's Kit) is to be used for generating program code with the GEM interface.

For example: When using Haba Hippo-C to compile and run the example programs, I found that all the **int** variable declarations had to be changed to **short** in order for the GEM calls to do anything but crash. It turns out DRI's C compiler defaults **int** to 16-bit data while Hippo's **int** defaults to 32 bits.

All things considered, the ST GEM Programmer's Reference helps fill a large information gap about the Atari ST computers. It shows signs of being rushed to print, and because of the wide scope of information covered, some topics are treated far too briefly to be understood fully from this text. But after all, this is a reference book and not a tutorial.

The book's best features are its concise listing of the GEM function calls and parameters, plus the short program examples found at the end of each chapter. I compiled and ran several of these programs using Hippo-C with only minor changes. An optional disk containing the programs is also available for \$14.95.

At \$19.95, the softbound 414-page ST GEM Programmer's Reference should be considered an excellent value, providing the documentation necessary to begin exploring the GEM programming environment. 

HOT OFF THE PRESS

PRESENTING THE ST
Gives you an in-depth look at this sensational new computer. Discusses the architecture of the ST, working with GEM, the mouse, operating system, all the various interfaces, the 68000 chip and its instructions, LOGO. 200pp \$16.95

ST Beginner's Guide
Written for the firsthand ST user. Get a basic understanding of your ST. Explore LOGO and BASIC from the ground up. Simple explanations of the hardware and internal workings of the ST. Illustrations, diagrams. Glossary. Index. 200pp \$14.95

ST INTERNALS
Essential guide to the inside information of the ST. Detailed descriptions of sound and graphics chips, internal hardware, I/O ports, using GEM. Commented BIOS listing. An indispensable reference for your ST library. 450pp \$19.95

GEM Programmer's Ref.
For serious programmers needing detailed information on GEM. Presented in an easy-to-understand format. All examples are in C and assembly language. Covers VDI and AES functions. No serious programmer should be without. 410pp \$19.95

MACHINE LANGUAGE
Program in the fastest language for your Atari ST. Learn 68000 assembly language, its numbering system, use of registers, structure & important details of instruction set, and use of internal system routines. Geared for the ST. 280pp \$19.95

ST TRICKS & TIPS
Fantastic collection of programs and info for the ST. Complete programs include: super-fast RAM disk; time-saving printer spooler; color print hardcopy; color printer output hardcopy; creating accessories. Money saving tricks and tips. 260pp \$19.95

ST GRAPHICS & SOUND
Detailed guide to graphics and sound on the ST. 2D & 3D function plotters, Moiré patterns, graphic memory and various resolutions, fractals, recursion, waveform generation. Examples written in C, LOGO, BASIC and Modula2. 250pp \$19.95

ST LOGO GUIDE
Take control of your ST by learning ST LOGO—the easy to use, powerful language. Topics include: file handling, recursion-Hilbert and Sierpinski curves, 2D and 3D function plots, data structure, error handling. Helpful guide for ST LOGO users. \$19.95

ST PEEKS & POKES
Enhance your programs with the examples found within this book. Explores using different languages BASIC, C, LOGO and machine language, using various interfaces, memory usage, reading and saving from and to disk, more. 280pp \$16.95

BASIC Training Guide
Thorough guide for learning ST BASIC programming. Detailed programming fundamentals, commands descriptions, ST graphics & sound, using GEM in BASIC, file management, disk operation. Tutorial problems give hands on experience. 300pp \$16.95

BASIC TO C
Move up from BASIC to C. If you're already a BASIC programmer, you can learn C all that much faster. Parallel examples demonstrate the programming techniques and constructs in both languages. Variables, pointers, arrays, data structure. 250pp \$19.95

3D GRAPHICS
FANTASTIC! Rotate, zoom, and shade 3D objects. All programs written in machine language for high speed. Learn the mathematics behind 3D graphics. Hidden line removal, shading. With 3D pattern maker and animator. \$24.95

The Atari logo and Atari ST are trademarks of Atari Corp.

Other software and books coming soon. Call or write for your free catalog. Dealer inquiries welcome—over 1400 dealers nationwide.

New Products

by GIGI BISSON,
Antic Assistant Editor

With the **OS-9 68000** operating system (\$299 including BASIC, \$249.95 without), up to five STs can be linked to function as a multi-user, multi-tasking system with the ability to send files from one ST to another. Or five dumb terminals could access a single 1040ST with 10 megabyte hard disk drive. The optimum number of stations sharing an OS-9 system would actually depend on the total amount of memory available and the memory requirements of each application in use.

Full-function C and Pascal compilers (\$395 each) are available. The UNIX-like operating system can run many C programs designed to run under UNIX. An ST using OS-9 can also run other OS-9 applications, such as Lifetree Software's ST version of the **Volkswriter Deluxe 2.2**, word processor (\$295), an established IBM PC product compatible with the Hewlett Packard Laserjet printer.

Microtrends President Jim Solomon calls this a "minicomputer environment on a micro," and is marketing the operating system for schools, businesses, and in science and engineering as an intelligent workstation, especially on the 1040ST.

The possibilities include accessing a single **KnowledgeSet CD-ROM Player** from several ST terminals in a library or school. Or even using the Atari 800XL running VT-52 terminal emulation software as a dumb terminal attached by cable to the ST to run text-based OS-9 applications.

A totally character-based operating system, OS-9 doesn't use the ST's graphics, the mouse or GEM. "But there may be many graphic possibilities down the road," Solomon says.

Microtrends, Inc., 650 Woodfield Drive, Suite 730, Schaumburg, IL 60195. (312) 310-8928. FINAL.

Lifetree Software, 411 Pacific Street, Monterey, CA 93940. (408) 373-4718. PRESS.

Atari ST and IBM PC computers can share information and software on **Imagi-**

net (\$495), the first local area network for the ST. Imaginet can support up to 63 computers and is fully compatible with BMB's **The Manager** (\$195), a full-function database and report generator for the ST. Identical to BMB's \$695 IBM version of The Manager, the database can be shared between both machines even when used without the network.

BMB's **File Server System** (\$895) for the ST is actually a dedicated IBM PC clone computer with a 20-megabyte hard disk. The file server can accommodate 63 STs linked to BMB's Imaginet.

BMB Compuscience, 500 Steeles Avenue, Milton, Ontario L9T 3P7. (416) 826-2516. FINAL.

Sig Hartmann, president of software for Atari Corp., calls **ST One Write** "the kind of software that will sell the ST computer." He's right. ST owners have been waiting for any accounting package—especially a small business accounting package.

Announced at the Spring COMDEX in Atlanta, **ST OneWrite Cash Disbursements** (\$129.95) marks game company Sierra On-Line's first entry in the productivity software market. Based on the uncomputerized "one-write" or "pegboard" accounting system used in millions of small businesses, it uses ST graphics to visually recreate familiar "one write" checks, balance sheets and forms. Sierra will follow with accounts receivable and general ledger programs in the Fall.

Kids age 8-12 learn about the American work ethic, how to handle money and make change as America's favorite duck works to earn money to build a playground in **Donald Duck's Playground**, (\$24.95) Sierra's second ST educational game.

Sierra On-Line, Inc., Coarsegold, CA 93614. (209) 683-6858. FINAL.

Designed by Lee Isgur, top Wall Street financial analyst and VP of Paine Webber, New York, Isgur **Portfolio System** helps both casual investors and full time professionals compile and manage information to make investment decisions. It instantly updates your personal stock portfolio with data from online services such as Dow Jones and CompuServe by utilizing **I*S Talk**, a complete telecommunications program included with the package. The price, \$199.95 is \$50 lower than the IBM-PC version and it utilizes the GEM interface.

If you make a mistake, you'll hear **Thunder!** This \$39.95 writer's assistant package makes a 50,000-word real time spelling checker, abbreviations expander and a statistics report generator available from the desktop within other programs such as word processors and databases. The abbreviations expander will automatically expand any two stroke abbreviation into full form—turning US into United States for example. A document analyzer counts word statistics including a readability score based on the Flesch index, a test indicating how many years of schooling an average reader needs to understand what you've written. Coming soon: **Paperclip Elite**, the ST version of the popular 8-bit word processor.

Batteries Included, 30 Mural Street, Richmond Hill, Ontario, L4B 1B5, Canada. (416) 881-9816. FINAL.

Regent Base (\$99.95) is a full-function GEM relational database. Commands are in simple English and the GEM interface is used extensively, with windows, drop-down menus and mouse. The 100% machine language program uses all available memory, has 15 printer drivers and is not copy protected. Regent Base indexes multiple fields within a table and can sort three fields simultaneously. It is compatible for mail-merge with **Regent Word II** (\$99.95), the word processor newly reissued in a full GEM version with a 30,000-word spelling checker. Owners of Regent Word I can upgrade to the new version for \$25.

Regent Software, 7131 Owensmouth, Suite 45A, Canoga Park, CA 91303. (818) 883-0951. FINAL.

Software Toolshop Ltd. has converted its entire range of CP/M-80 software to the Atari 3 1/2-inch disk format, including **Prospero Pascal**, **Borland Turbo Pascal** and **Microsoft Macro 80**. All require the Atari Corp. CP/M emulator. For a catalog write:

Software Toolshop, 180 High Street North, Dunstable Beds LU6 1AT. Great Britain (0582) 699657. PRESS.

Action Pak (4in1) gives you four useful applications on a single \$39.95 disk. Disk Labeler prints ST labels with as many

continued on next page

as 38 alphabetized file titles. Banner prints giant placards in any of five fonts and is compatible with DEGAS. Synfile Converter will transfer SynFile+ 8-bit database files into ST database files via a null modem. Typewrite is a line-at-a-time typewriter that installs as a desktop accessory and is always handy for addressing envelopes, filling out forms, or typing short memos.

Action Software, 69 Clementina Street, San Francisco, CA 94105. (415) 974-6638. FINAL.

The makers of the Pawn graphic adventure game announced **Starglider** (\$44.95), a strategic simulation in three dimensions. This is the first of Firebird's Rainbird series of adventure games.

Firebird, 74 North Central Avenue, Ramsey, NJ 07746. (201) 934-7373. PRESS.

"It's definitely not a direct port of the 8-bit version of **Silent Service**," says John Fredrick at MicroProse. The \$39.95 ST version of the best-selling submarine warfare simulation game utilizes ST sound, graphics and highly detailed maps that you can zoom in and out of.

MicroProse, 120 Lakefront Drive, Hunt Valley, MD 21030. (301) 667-1151. FINAL.

Dac-Easy, (\$69.95) the IBM accounting package named InfoWorld's 1985 Product of the Year, has been ported directly to the ST. It includes general ledger, accounts receivable, accounts payable, purchase order, control billing, inventory and forecasting (but not payroll or taxes). It is the tool Dac Software Inc. uses to do its own multi-million-dollar-a-year accounting. FINAL.

Dac Software, Inc., 4801 Spring Valley Road, Building 110 B, Dallas, TX 75244. (214) 458-0038. FINAL.

Michtron has released several new products—for a total of 28 in their entire ST line. **The Personal Money Manager** (\$49.95), a personal accounting package utilizes GEM; **Cornerman**, a Sidekick-style desktop utility includes clock, calculator, phone book and more; **DFT** (\$49.95) transfers files between the ST and IBM PC; **DOS Shell** (\$39.95) mimics the MS-DOS command structure with global commands; **Kissed** (\$39.95) is an odd

name for this a full screen editor and debugger; Destroy enemy spies in **Major Motion** (\$39.95). Infiltrate enemy gold mines in **Gold Runner** (\$39.95), a 63-screen color game. Or play **Time Bandits** (\$39.95). This arcade adventure from England took eight months and 300K of machine code to create and "uses the ST graphics to the max" says Michtron president Gordon Monnier.

Michtron, 576 Telegraph, Pontiac, MI 48053. (313) 334-5700. FINAL.

Protect your rolling rodents with the **MousePad** (\$9.95). This 9×11 inch piece of nylon-covered neoprene rubber gives the mouse ball a safe, smooth, dust-free surface to roll on with more traction and control than your lumpy, bumpy desk.

Mousetrak, Inc. 3047 St. Helena Way, St. Helena, CA 94574. (707) 963-8179. FINAL.

The slightly smaller **WestRidge Mouse Pad** (\$8) is not just another pretty piece of rubber. It reduces fatigue, reduces mouse ball wear and enhances cursor control.

West Ridge Designs, 305 N.W. 12th, Portland OR 97209. (503) 248-0053. FINAL.

What a great idea. One printer, several "Plug n' Print" interfaces (\$99 each) and the **Okimate 20 Color Printer** (\$169) is compatible with many computers—including the ST. It prints more than 125 shades of color, creating high resolution pictures or overhead projection graphics on acetate. The Oki also has several built-in type fonts including fine print and superscripts, and prints 80 characters per second in draft mode, 40 cps in letter quality mode.

Okidata, 532 Fellowship Road, Mt. Laurel, NJ 08054. (609) 235-2600. FINAL.

Audio Light **Slideshows** in Christmas, General Interest and Halley's Comet themes (\$15 each) are animated musical presentations created with the **N-Vision** program and Activision's **Music Studio**. (**Antic** uploaded the Christmas show, featuring traditional carols and scenery, onto CompuServe SIG*ATARI last December.) Halley's Comet uses an advanced

version of N-Vision's **A-Light Slideshow** program (included with all three disks) to create a rudimentary but impressive form of animation by squeezing more picture files on the disk and speeding up the file display.

Audio Light, Inc., 146 Town Terrace, Suite 4, Los Gatos, CA 95030. (408) 395-0838. FINAL.

Henry's Fundamental BASIC is an easy-to-use fundamental BASIC language interpreter aimed at the home user. This \$49.95 subset of **Philon Fast/Basic M** (\$129), Philon's more sophisticated compiler, offers full syntax compatibility.

Philon, Inc., 641 Avenue of the Americas, New York, NY 10011. (212) 807-0303. FINAL.

STKey (\$29.95) lets you program the ST function keys to accept customized commands for your application programs and access them from the desktop. **Disk-menu**, a \$49.95 archive and backup utility, can also split large files between disks and recover lost disk space.

Solid Applications, Inc., 1333 Moon Drive, Yardley, PA 19067. (215) 736-2449. FINAL.

Atari ST Logo by Martin Sims (\$16.95), a thick book packed with beginner-level Logo programming tutorials, is profusely illustrated with flow charts and photographs of programming examples as they appear on the screen. Includes information on how to create simple 3-D pictures in Logo, and tutorials describing how to program an electronic clock and an interactive logic game.

Hayden Book Company, 10 Mullholland Drive, Hasbrouck Heights, NJ 07604. (201) 393-6306. FINAL.

New ST product notices are compiled from information provided by the products' manufacturers. Antic assumes no responsibility for the accuracy of these notices or the performance of the product. Each mention is followed by a code word indicating that, at press time, Antic had seen a FINAL marketable version, near-final BETA, earlier ALPHA, incomplete DEMO, or PRESS release.

SOFTWARE LIBRARY

Antic type-in listing section includes every full-length program from this issue. Listings are easier to type and proofread, easy to remove and save in a binder if you wish.

DISK SUBSCRIBERS: Programs for 8-bit Atari computers can be used immediately. Just follow instructions in the accompanying magazine articles. ST Owners: See monthly disk's ST Help File for instructions on how to transfer programs to 3-1/2 inch disk.

No part of this publication may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior written permission of the publisher.

Antic program listings are typeset on the Star's SB-10 printer—from Star Micronics, Inc., 200 Park Avenue, New York, NY 10166.

TYPING SPECIAL ATARI CHARACTERS

Antic printed program listings leave a small space between each Atari Special Character for easier reading. Immediately below you will see the way Antic prints all the standard Atari letters and numbers, in upper and lower case, in normal and inverse video.

```

ABCDEFGHIJKLMN OPQRSTUVWXYZ
ABCDEFGHIJKLMN OPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz
abcdefghijklmnopqrstuvwxyz
0123456789          0123456789
  
```

The Atari Special Characters and the keys you must type in order to get them are shown in the two boxes below.

Whenever the CONTROL key (CTRL on the 400/800) or SHIFT key is used, *bold it down* while you press the next key. Whenever the ESC key is pressed, *release* it before you type the next key.

Turn on inverse video by pressing the Reverse Video Mode Key . Turn it off by pressing it a second time. (On the 400/800, use the Atari Logo Key  instead.)

Among the most common program typing mistakes are switching certain capital letters with their lower-case counterparts—you need to look especially carefully at P, X, O and 0 (zero).

Some of Atari Special Characters are not easy to tell apart from standard alpha-numeric characters. Usually the Special Characters will be boxed. Compare the two sets of characters below:

▣	▣ CTRL G	\	▣ SHIFT +
▢	▢ CTRL N	-	▢ SHIFT -
▤	▤ CTRL R	-	-
▥	▥ CTRL S	+	▥ +

HOW TO USE TYPO II

TYPO II is the improved automatic proofreading program for Antic's type-in BASIC listings. It finds the exact line where you made a program typing mistake.

Type in TYPO II and SAVE a copy to disk or cassette. Now type GOTO 32000. When you see the instruction on the screen, type in a single program line **without the two-letter TYPO II code** at left of the line number. Press [RETURN].

Your line will reappear at the bottom of the screen with a two-letter TYPO II code on the left. If this code is not exactly the same as the line code printed in the magazine, you mistyped something in that line.

To call back any line previously typed, type an asterisk [*] followed (without in-between spaces) by the line number, then press [RETURN]. When the complete line appears at the top of the screen, press [RETURN] again. This is also the way you use TYPO II to proofread itself.

To LIST your program, press [BREAK] and type LIST. To return to TYPO II, type GOTO 32000.

To remove TYPO II from your program, type LIST "D:FILENAME",0,31999 [RETURN] (Cassette owners LIST "C:"). Type NEW, then ENTER "D:FILENAME" [RETURN] (Cassette—ENTER "C:"). Your program is now in memory without TYPO II and you can SAVE or LIST it to disk or cassette.

Owners of the BASIC XL cartridge from O.S.S. type SET 5,0 and SET 12,0 before using TYPO II.

TECH TIPS

If you want to try a different approach to protecting your valuable programs, you might consider a hardware key. Hardware key protection is now starting to appear with commercial software such as Batteries Included's Paper-Clip word processor.

HOW IT WORKS

Every joystick port on an 8-bit Atari has two PADDLE inputs. Each input can return a number between zero and 228 to your program. This value is based on the amount of electrical resistance in the PADDLE controller.

Usually, this resistance is provided by a paddle controller. But if we solder a pair of fixed resistors across the appropriate pins of the joystick plug, we can easily write code in our program to look for these known values and take whatever action we want if they are not there.

FIGURE 1

+5 volts DC

paddle A

paddle B

You will need a few inexpensive components: a DB-9 female plug (\$2.49, Radio Shack #276-1538), a hood for the plug (\$1.99, Radio Shack #276-1539) and two resistors (19 cents, Radio Shack) with any different values between 470 ohms and 10K ohms. These resistors will supply your hardware encoding.

Solder one end of both resistors to the plug's pin 7. Solder the free end of one resistor to pin 9 (PADDLE 0) and the free end of the other resistor to pin 5 (PADDLE 1). Enclose the resistors with the hood.

Insert your key into joystick port 1 and boot your computer with BASIC. Type in this short program:

```
1 A = PEEK(624):B = PEEK(625)
```

```
2 ? "A = ";A;"B = ";B
```

You will see values for A and B displayed on the screen. These are the values you will want your program to look for. For example, you could write a line like this:

```
100 IF PEEK(624)<>A AND PEEK(625)<>B THEN PRINT "INSERT KEY":GOTO 100
```

If you intend to use the key with a BASIC program, a machine language loader that checks for the key would probably be the best approach. If you write one, share it with other Atari users by sending it to the Antic I/O Board for possible publication.

(Antic came across this Hardware Key project in the newsletter of Milatari, the Milwaukee Atari Users Group, where it was put together by Gerald Hagopian.—ANTIC ED)

New: Prospero's professional language compilers for the Atari 520ST

PRO PASCAL & PRO FORTRAN-77 FOR ATARI 520ST

\$149

ISO-PASCAL

Pro Pascal is validated to ANSI 770X3.97 Class A (no errors) on the Z80 processor under CP/M and the 8088 processor under PC-DOS. This provides a guarantee that the compiler is complete and works perfectly.

Ideal for

- Atari software developers
- schools and colleges
- students of computing
- development of personal skills
- solving technical problems
- training institutions

PASCAL ↔ FORTRAN
INTERLINKABLE OBJECT CODE

**NO BUGS
YOU DON'T
HAVE TO
FILL IN ALL
THE HOLES**

✓ Produces compact efficient code

16 digit

Single and double precision
IEEE format arithmetic gives
7 or 16 digit precision

FORTRAN 77

Pro Fortran-77 is a full implementation of ANSI Fortran 77 with no omissions and many useful extensions

USE THE LANGUAGES
THE PROFESSIONALS DO:
PASCAL AND FORTRAN

Lazy I/O

All files closed on exit from procedure

Compilers include:
compiler, linker,
run-time libraries,
librarian,
X-ref program,
sample programs,
200 page manual.

datasheets and magazine
reviews!

At Prospero we specialise in writing language compilers. We produce the best possible compilers, conforming to the appropriate standard, and giving programmers a secure base on which to build.

"Pro Pascal is not only ISO-validated, it is also a superb-quality and very full software development tool."

Antic Pays To Publish Outstanding Work

With all the new Atari products coming to market, **Antic** is once again open for freelance reviews—and for freelance articles without programs. If you have never written for us before, you'll need to send a sample review or article so that your writing can be evaluated before we consider you for an assignment.

Material accepted by **Antic** should be submitted *both* as disk files and printed hardcopy format. Your submissions cannot be returned to you unless you provide a stamped, self-addressed return envelope.

Please mail your submissions to:

New Products

New Products notices are compiled by the **Antic** staff from information provided by the products' manufacturers. **Antic** welcomes such submissions, but assumes no responsibility for the accuracy of these notices or the performance of the products listed.

PR CONNECTOR

ICD
1220 Rock Street
Rockford, IL 61101
(415) 968-2228
\$79.99

Thinking of buying a Hayes compatible modem that plugs directly into your computer? Now you have an alternative to the elusive Atari 850 Interface. The **ICD PR Connector** has one parallel port and two serial ports, just like the 850. It's compatible with any terminal program that uses a standard `Autorun.sys` autoboot file or DOS 2, and comes with three terminal programs on disk; `AMODEM 7.2`; `RSCOPE`, a version of `TSCOPE`; and the popular 850 Express. A making it compatible with Batteries Included Hometerm is also included. Uses standard 850 cables, additional cables are available for \$15 each, or ICD will custom build one for \$30.

800XE PLUS

(memory upgrade)
Triple C Computers
6807 226th Avenue N.E.
Stacy, MN 55079
(612) 462-4435
\$45

This kit supplies all hardware and signal decoding to upgrade an 800XL to 256K memory. It is compatible with the 130XE RAMdisk and the SpartaDOS Construction Set. Soldering is required and you must provide your own 256K chips. Triple C will install the kit in your 800XL for an extra \$30.

INSYST!

(business software)
SoSoft
2513 #E Sylvester Road
Albany, GA 31707
(912) 888-0821
\$79.95, 48K disk

InSyst! is an inventory system for

small businesses. Written in ACTION! for speed, it features 12-character item numbers, 24-character descriptions, use of minimum fields to compute suggested orders, multiple costs on purchases, sales history, bin location and a vendor code field.

MECH BRIGADE

(entertainment software)
Strategic Simulations Inc.
1046 N. Rengstorff Avenue
Mountain View, CA 94043
(415) 964-1353
\$59.95, 48K disk

In this "sister game" to *Kampfgruppe*, Soviet and NATO forces fight modern tactical warfare in a time period spanning the 1980s and 1990s. Four scenarios, each in a different area of West Germany, and over 40 armored vehicles are provided.

RAMJET 256K

(printer buffer)
Omnitronix Inc.
P.O. Box 43
Mercer Island, WA 98040
(206) 236-2983
\$269

The fast **Ramjet 256K Print Buffer** comes in versions for either standard parallel or RS-232 serial printers. It has a pause button for using single sheets of paper.

VOICE MASTER DEMO DISK

(software)
Covox Inc.
675-D Conger Street
Eugene, OR 97402
(503) 342-1271
\$5, 16K disk

This new Covox disk contains programs and digitally-encoded speech vocabularies demonstrating the audio capabilities of the \$89.95 Voice Master Speech and Music Processor for all Atari 8-bit computers. Included on the disk are a talking calculator and talking keyboard.

SCENERY DISKS 1-6

(For Flight Simulator II)
SubLogic Corporation
713 Edgebrook Drive
Champaign, IL 61820
(217) 359-8482
\$19.95, 48K disk

Each of these scenery disks covers a region of the Western half of the U.S. and expands the potential flying environment of SubLogic's best-selling Flight Simulator II software. The six-disk set costs \$99.95.

TINKERTUNE

(software)
Minerva Research Limited
35 Olympia Avenue
Victoria, BC
Canada V8V 2N3
(604) 385-3711
\$29.95, 48K disk

Tinkertune turns your computer into a three-octave mini-organ with a choice of nine different scales, four wave envelopes and percussion sound. The live performance feature plays a single note or a full chorus at the touch of a key or joystick.

HOME ROBOTICS WORKSHOPS

(robot kits)
Multibotics Inc.
#A 2561 South 1560 West
Woodscross, UT 84087
(801) 298-9077
\$59.95-\$199.95

Build robots to interface with your computer. These workshops provide projects and experiments showing how computers interact with the real world. The master module allows your computer to function as a variable-speed motor controller.

Return the favor. When you call a manufacturer or supplier about a product you've seen advertised or otherwise mentioned in **ANTIC**, please tell them so. This will help us to continue to bring you the latest information about products that will make your Atari computer an even more valuable investment in the future.—**ANTIC ED**

Flight Simulator II

For
Atari computers
with 48K memory

Put yourself in the pilot's seat of a Piper 181 Cherokee Archer for an awe-inspiring flight over realistic scenery from New York to Los Angeles. High speed color-filled 3D graphics will give you a beautiful panoramic view as you practice takeoffs, landings, and aerobatics. Complete documentation will get you airborne quickly even if you've never flown before. When you think you're ready, you can play the World War I Ace aerial battle game. Flight Simulator II features include ■ animated color 3D graphics ■ day, dusk, and night flying modes ■ over 80 airports in four scenery areas: New York, Chicago, Los Angeles, Seattle, with additional scenery areas available ■ user-variable weather, from clear blue skies to grey cloudy conditions ■ complete flight instrumentation ■ VOR, ILS, ADF, and DME radio equipped ■ navigation facilities and course plotting ■ World War I Ace aerial battle game ■ complete information manual and flight handbook.

See your dealer . . .

or write or call for more information. For direct orders please add \$1.50 for shipping and specify UPS or first class mail delivery. American Express, Diner's Club, MasterCard, and Visa accepted.
